FRUITS, TREES AND FLOWERS
CATALOG, 1917-1918
THE MUNSON NURSERIES
DENISON, TEXAS

PLEASE READ THE FOLLOWING

TERMS, CONDITIONS, SHIPPING, ETC.

1. **Cash** (By Draft, Money Order, or Registered Letter) with order will secure prompt filling. No goods shipped unless **Cash** or **Satisfactory Security Accompanies** the order. If personal checks are sent, include 15 cents for collection, which amount they cost us.
2. **To Secure Goods Not Wanted Sent at Once**, send one-half the cost with the order. No reserve will be made otherwise. **Goods will be shipped "C. O. D."** only when one-half payment is sent with order, or satisfactory proof of reliability is furnished.
3. **Our Responsibility Ceases** after delivery except for mistakes in filling, which must be reported **immediately** after receipt of goods, to admit of adjustment. A double system of checking is employed in putting up orders, so that mistakes are rare, and sometimes customers complain of an error and afterwards find it was their own mistake.
4. **Substitution.** If it is not explicitly stated in the order that no substitution is permitted in case the variety ordered is sold out, we shall consider permission to substitute granted, and then put in place of the variety ordered, always with its correct name, and one of equal or better value, unless such is not in stock, when the variety will be left unfilled and the money for it returned.
5. In order to secure what you wish, send your order early in the season, before stock is sold. Orders received late in the season may expect to find assortments broken in any nursery.
6.  Please do not order articles not named in catalog. We catalog only what we have for sale, and aim to sell only what we produce.
7. **Customers Will Generally Be Most Successful** in getting desirable assortments by leaving the selection, in part at least, to us, as we have much experience in testing and growing for market; but we desire everyone to have his or her choice as nearly as possible.
8. **Guarantee and Responsibility.** We send out thrifty and healthy stock, properly packed and in good condition, take railroad or express receipt "in good order," and are not responsible for losses or damages caused by delays. We do not replace trees that die under conditions over which we have no control, such as drouths, freezes, excessive rains, unsuitable soils, improper handling, and after-care. While we exercise the greatest care to have all our trees and plants true to label, and agree to replace all such as may by accident or oversight prove untrue to name, free of charge, it is mutually agreed and understood between the purchaser and ourselves that our guarantee of genuineness shall not in any case make us liable for any sum greater than originally received for such untrue trees or plants.
9. **It is to Our Own Interest** to give customers the best terms and selections possible. But we cannot prevent Drouths, Severe Winters, Early and Late Frosts, Insects and Rabbits, etc., from cutting nor plants from dying by bad treatment in other hands, **hence we never insure trees to live after leaving our possession**, but we do deliver stock in good order, true to name. In case we fail in these we replace at once or refund money. After stock is accepted, we replace none that may die after planting. Unsatisfactory stock must be reported at once on receipt of same to secure adjustment.
10. **We Are Responsible to All of Our Customers**, and to them only, for the character of the goods, and to them or their forwarders—express and railway companies—we guarantee to deliver stock in good order, true to name. With such delivery our responsibility ceases.
11. **Season for Shipping and Transplanting.** We begin digging strawberry plants October 15, **not earlier**, and other stock November 10, and continue almost uninterruptedly to dig and ship until March 10, November, December and February being the best months in which to transplant in the South.
12. **Trees and Plants by Mail or Parcel Post.** Packages or bales of trees not measuring over 72 inches in length and girth combined can be sent by Parcel Post up to 50 pounds if within 150 miles of Denison, and up to 20 pounds for any distance. The zone rates apply. If any of our customers desire their orders sent by Parcel Post, we will send them that way, but remittance must be made to cover cost of postage as same has to be paid in advance.

PRICES

13. Stock will be carefully and securely packed, and delivered to express or freight depot in Denison at the prices as named throughout the catalog. For quality of stock offered, these prices are quite low. You will find that it will cost you less to order at these prices and pay your own express, than to order from catalog or agents quoting delivered prices. By actual comparison it will be seen that these prices plus the express are actually lower than prices quoted with stock delivered. In this way you get stock at its lowest price, and transportation at actual cost, the lowest possible combination.
14. We formerly had two scales of prices, one a F. O. B. Denison Scale, and one a "Prepaid" Scale, giving the customer the option of either scale. But by experience we found the greatest majority of our customers preferred to order by the F. O. B. Denison Scale and pay their own express for it was cheaper than to order by the Prepaid Scale. So for this season we will only quote the one scale of prices and that will be the F. O. B. Denison Scale. If, however, anyone wishes us to prepay the express charges, we will gladly do so if money is sent for that purpose. The express charge is the same, whether sent "collect" or "prepaid."
15. **Cost of Packing** is considerable, but on all orders of \$2.50 or more we will do the packing free. On orders of less than \$2.50 add 35 cents for cost of material and time used in packing. We pack in moist moss, straw or shingle-tow, and thoroughly protect with outside packing.
16. **Prices as to Quantity.** As noted, prices are given for "each," "dozen" and "100." When 1 to 5 of a variety is ordered, remit according to the each price. When 6 to 39 of a variety is ordered, remit according to the "dozen" price. When 40 to 400 of a variety is ordered, remit according to the "thousand" price, which is 10 per cent discount from the "100" rate.

NAMES OF LIKELY BUYERS OF NURSERY STOCK AND HOME IMPROVERS.

We will pay as follows for names and addresses of home owners who are likely to want nursery stock: If your order is \$3 or more, send 6 names and deduct 25 cents.
If your order is \$6 or more, send 6 names and deduct 25 cents, or send 12 names and deduct 50 cents.
If your order is \$20 or more, send 6 names and deduct 25 cents, or send 12 names and deduct 50 cents, or send 24 names and deduct \$1.00.
These names must be clearly written upon a separate sheet from that of your order or letter; unless so written we cannot allow the deduction. Put only one name and address on a line.

HORTICULTURAL INFORMATION

For the benefit of our customers and friends, we have listed below a set of books that touches upon nearly every phase of fruit and ornamental growing. The prices attached are the prices of the publishers, and we will take pleasure to order any of our books at such cost prices to us. By allowing our customers the cost price, the books will be sent direct from the publishers. We do not keep the books in stock, for if we did we would have to charge a higher price in order to cover expenses of keeping such in stock, as rent for room, transportation from publishers here, etc.

All you have to do is to send us the money as per price listed, and we will take pleasure in forwarding the order to the various publishers without further cost to you. No discounts.

FRUITS AND FRUIT CULTURE

 Weeds and How to Eradicate Them. T. Shaw, **50c.**

For Information on Spraying, Diseases of Trees and Plants, and all kindred subjects, write your State Agricultural Department, or Experiment Station, or Department of Agriculture, Washington, D. C., for bulletins on these subjects. They will be furnished to you free of charge and will give you the latest and best information. The National Government and most all the States maintain a department devoted to horticultural interests, and their information on spraying, diseases of trees and plants, etc., is the best to be had.

[Note—If your trees are infected with any insects or fungous diseases, send infected portion to your Experiment Station, your State Entomologist, or United States Entomologist, at Washington, D. C.] Your postmaster can give you correct address of the Experiment Station in your State.

CARE OF TREES ON ARRIVAL

BE CAREFUL in unpacking to note everything, and immediately "heel in" in moist soil till planted, or plant at once. Never allow the roots to dry, or failure will most likely result. If the stock is received in a frozen condition, place the bales or boxes in a dark cellar or bury in earth till thawed out.

Before planting remove all broken and extra long roots with a sharp knife, cutting from below outward, not above downward. One-year-old peach or apple trees should be cut back to a naked stem 1½ to 2 feet high; leave no side branches. Two-year-old trees should have their branches cut back to their half length or more, the lower less than those above; cutting in shorter as you go upward, and leaving the leader the longest. Plant as deep as the trees stood in the nursery row, excepting dwarf pear and cherries, which should be planted sufficiently deep to cover the stock from two to three inches.

The ground should be thoroughly plowed and subsoiled at least fifteen inches deep. If to be set in land which cannot be plowed, dig holes not less than eighteen inches deep and three feet across. Then fill up with rich, mellow earth, but no fresh manure, to such a point that the tree set thereon will stand the same depth in soil, when the hole is filled, as it stood in the nursery row. Lean the tree to the south considerably and fill in among the roots carefully with mellow soil, and when completely covered an inch or two, press the soil firmly down with the foot, after which level up the hole with loose soil, which should not be tramped. If the soil is dry, pour in a bucketful or two of water before filling the hole, and when settled away, level up with loose soil. Keep the soil thoroughly pulverized about the tree, and free from weeds during the growing season. Do not water through the summer time by pouring water on top of the ground, but dig trenches around the tree and fill with water every evening until ground is thoroughly saturated below the roots; then no more watering will be needed for two weeks. Partial surface watering kills more trees than it saves. Water only in drouth, when trees show need of it.

For more detailed information on this subject and on future care of the trees, we respectfully refer you to American Fruit Culturist, or Bailey's Principles of Fruit Culture, found in the list of books.

For Information on Spraying, Diseases of Trees and Plants, and all kindred subjects, write your State Agricultural Department, or Experiment Station, or Department of Agriculture, Washington, D. C., for bulletins on these subjects. They will be furnished to you free of charge and will give you the latest and best information. The National Government and most all the states maintain a department devoted to horticultural interests, and their information on spraying, diseases of trees and plants, etc., is the best to be had.

TRANSPORTATION RATES

Nursery stock, when baled and completely wrapped, takes first class rates by freight. When boxed, takes third class rates by freight. That is where the first class rate is \$1.30 per 100 pounds; the third class rate is 90 cents per 100 pounds. But in many cases the cost of box and the extra weight of box more than offsets the gain made by thus packing. That is if 300 trees baled will weigh 350 pounds, they would weigh 500 pounds if boxed.

Nursery stock by express takes the GENERAL Special in Texas, and class 2 rates to other states. Both the general special and class 2 rates are 20 to 25% less than the regular merchandise express rates. Unless the shipment of stock is large, we suggest that it be sent by express, as it is more satisfactory, rapid and safer. We find that on shipments of 300 pounds or less the express charges are as low by express as by freight, and on bales of 125 pounds or less the express is even lower. When shipments are very large, we can box so they will carry safely by freight, even if out two weeks or more. The most unsatisfactory thing about freight shipments is that they are often subject to delays, sometimes in bad spells of weather.

In making your order, please give explicit directions for shipment. When such are not given, we will use our best judgment as regards our customers interest and safety of stock, but will not be responsible for any dissatisfaction.

OUR SHIPPING FACILITIES

in every direction from Denison are most excellent. The following railways and express companies operate into and out of Denison:

Missouri, Kansas & Texas Railway (Five Divisions).
Houston & Texas Central Railway (Southern Pacific lines).
Texas and Pacific Railway.
Frisco System.
Missouri, Oklahoma & Gulf Railway.
Texas Electric Railway.
American Express.
Wells Fargo & Co. Express.
Electric Express.

APPLES

Plant Apple Trees in the South 20 feet apart north and south by 30 feet apart east and west, requiring 73 trees per acre. Best corn or cotton sandy land is suitable.

Read Bailey's Field Notes on Apple Culture, price 75 cents; or American Apple Orchard, \$1.00.

Prices (on all except Scott).

1 to 5 of a variety at "each" price.			
6 to 39 of a variety at the "dozen" rate.			
40 or more of a variety at the "hundred" rate.			
400 or more of a variety, 10 per cent discount from "hundred" rate.			
Size.	Each	Dozen	100
2 to 4 ft., whips.	.15	\$1.40	\$9.00
3 to 4 ft., partly branched.	.20	2.00	14.00
4 to 6 ft., well branched.	.35	3.00	20.00

DESCRIBED IN ORDER OF RIPENING

(Months mentioned are for North Texas.)

JUNE.

Early Harvest. Medium, bright straw-yellow. Tender flesh, sub-acid. Fine eating and cooking apple. Good for local market but rather tender for shipping.

Red June. Tree slow grower but bears young. Small to medium size; bright red skin; flesh tart and quality good. Fine table and market; best shipper of extra early varieties.

Fanny. Vigorous and productive. Large, red. Excellent quality, good cooking, eating and market.

JULY.

San Jacinto. Like a very large Red June apple, of which it appears to be seedling, coming in just as the Red June goes out. Tree vigorous and prolific; very productive. A variety of the highest merit both for market and table. Fruit hangs to the tree remarkably well and a fine keeper for an early apple.

American Summer. Medium to large; roundish conical; dull red stripes on a pale yellowish ground; rich, juicy and one of the best.

AUGUST.

Bledsoe. Originated and grown extensively for many years by Judge Bledsoe, formerly of Sherman, and orchardist of note, has proved to be an apple of great merit for the Southwest, and later, over a wide range, especially so in the high, western plateau. It is large, roundish oval, sometimes angular, greenish striped and splashed with red; flesh white, sub-acid, good. Tree very vigorous and prolific. August and later.

Jonathan. Of American origin. Medium, if thinned on the tree grows larger. Roundish conical, rich bright red on light yellow ground, few minute white dots; flesh yellowish white, tender, juicy, sprightly, sub-acid, a standard of excellence in market apples. Tree has a drooping, pendant habit; very productive, and requires rich soil. Universally popular. Should be gathered in August and stored to obtain best results.

Texas Red. One of the most highly esteemed apples in East Texas; large, solid red; fine; excellent keeper.

Rome Beauty. Large, roundish, mostly covered with bright red on pale yellow ground. Tender, of good quality.

Doyle. Originated in East Texas where it is highly praised. Large, striped, with high color.

Red June

OCTOBER AND LATER.

Ben Davis. Tree healthy, vigorous, an abundant bearer; fruit large, handsome, striped; flesh whitish, tender, juicy, sub-acid, only fair in quality. Popular on account of its good bearing quality.

Stayman's. (Stayman's Winesap.) Medium to large; oblate, conical; greenish yellow, mostly covered and indistinctly splashed and mixed with dull dark red, with numerous medium gray dots; flesh yellow, firm, tender, juicy, mildly sub-acid, aromatic; quality best. Another seedling of Winesap originated in Kansas; is much larger, more beautiful in color and better in quality and equal or better keeper.

Delicious. Winter. Of peculiar and distinctive shape; brilliant dark red, shading off to golden yellow at the blossom end; flesh fine-grained, juicy, crisp and melting; flavor sweet, with a slight acid taste. Tree vigorous, thrifty and a good, dependable cropper.

Black Ben Davis. Similar almost in every particular to Gano, except the shade of the red is deep and darker. Have only 1-year trees.

OCTOBER AND LATER APPLES—Cont'd.

Gano. Similar to Ben Davis, but deeper in color, and better in quality. Tree very hardy and vigorous. A rapid grower. An early, annual and prolific bearer. A valuable late winter apple.

Arkansas Black. Vigorous, abundant; dark red, medium; excellent market; seedling of Winesap.

Kinnaird. Strong, spreading tree, prolific; red, large; a superb Southern winter apple; the best of all Winesap seedlings. Flesh pale yellow, crisp, fine grained; of fine quality. Tree longest lived of all varieties tested with us; originated in Tennessee.

Arkansas. (Mammoth Black Twig; Paragon). Size large roundish, slightly flattened; color a dark mottled red; flesh yellow, fine-grained, with a mild, pleasant, sub-acid flavor. Tree a strong grower and abundant bearer. Large fruit and better tree than Winesap, of which it is a seedling.

Winesap. Medium; roundish conical form; mostly covered with red, on yellow ground; flesh fine, crisp, with a rich, high flavor. One of the best for market, dessert, or for general winter use.

In addition to above list we can supply a few

one-year trees of Red Astrachan (June) Cooper White (July) and Bismarck (October).

THE SCOTT APPLE

This is a variety that came as a stray in the orchard of Mr. J. W. Scott who lives six miles east of Denison, Texas. For more than thirty years Mr Scott has been growing this variety and had the exclusive use of it, as he did not propagate any trees except for his own use. Realizing that this variety is too good to lose, and wishing to do mankind a favor, he has consented for its dissemination.

The apple is of same season as American Summer, that is coming in before Jonathan and after San Jacinto. It is a rich yellow skin covered nearly all over with red stripes that make it quite attractive. The market here has taken all Mr. Scott could bring in at an average of 35 to 50 cents more per bushel than the best of other varieties, and would sell when the market would be overstocked.

We only have a limited number of trees, at **75¢** each. **\$7.50** per dozen.

CRAB APPLES

Cultural directions same as apple.

Prices.

	Each	Dozen
One-year, 2 to 3 ft.	.15	\$1.40
One-year, 3 to 4 ft.	.20	2.00
Florence. Pinkish-red, faintly striped with a darker red. Flesh yellow, crisp, tender, juicy. Tree upright and spreading.		
Hyslop. Brilliant carmine to dark purplish-red, overspread with a thick blue bloom. Tree upright, vigorous.		
Red Siberian. Bright red, small. Excellent for jellies.		

PEARS

Pears do well on a variety of soils—clay loam, sandy, gravelly and red soil. The soil must not be wet, should be drained, if not naturally drained. The knife is the best remedy for blight. Keep it cut off as fast as it appears. Cut back to 3 or 4 inches below where the twig or limb has blighted. Keep this up from time to time as the blight appears, and you can keep it down. We have found here and there that there is less blight where the trees are not cultivated after the second year, but weeds kept mown off. Plant 20 feet apart each way, requiring 135 trees per acre.

Prices.

One to 5 trees of a variety at the "each" price. Six to 39 at the "dozen" rate. Forty or more at the "100" rate.

Sizes and Variety.	Each	Dozen	100
Bartlett. Large, clear, bright yellow, with blush on sunny side; oblong shape tapering gradually toward stem end. Flesh white, buttery and rich.			
3 to 4 ft.	.25	\$2.50	\$18.00
4 to 5 ft.	.35	3.50	24.00
Brown Beurre. Large, brown skin, white flesh, extra fine quality.			
3 to 5 ft.	.35	3.50	
Beurre d'Anjou. Large, heavy, yellow shaded with dull crimson. Flesh white and most excellent buttery quality, fine grained. Tree long lived.			
3 to 5 ft.	.35	3.50	
Seckel. A very delicious flavored pear, juicy and sweet. Fine grained. Size small, pear-form; yellowish brown, with russet red cheek. Takes age to get to bearing good, but very prolific after it starts.			
3 to 5 ft.	.35	3.50	
Garber. A hybrid of the Chinese Sand Pear with one of the French type. Similar to Kieffer, but a month earlier, and of better quality.			
3 to 4 ft.	.20	2.00	14.00
4 to 6 ft.	.30	3.00	20.00
Kieffer. A most successful grower for the southwest. Tree vigorous and very prolific. Bears young. Of supposed Chinese Sand Pear and Bartlett hybrid. Size very large, very handsome, skin yellow with bright vermillion cheek. Does not ripen to perfection on tree, but if picked when skin shows trace of yellow, it will ripen to perfection, making a very juicy, delicious pear with a musky aroma. As near blight proof as pear can be called.			
3 to 4 ft.	.18	1.85	13.00
4 to 6 ft.	.30	2.75	19.00

(The Clapps Favorite, Howell, Bosc and LeConte all blight so easily that we ceased to grow them.)

"I wish to thank you very much for the fine Fruit Trees and Grape Vines you have sent me. They have been admired by many since I received them last Saturday. The Grape Vines are certainly grand and fine. I shall order your grape book as soon as I get thru planting my suburban home. Again thanking you for your seemingly special favor, I am,

Yours truly,
Edwin J. Minors (Dallas County)."

Abundance

PLUMS

Named in order of ripening.
Plant 18 feet apart each way, requiring 135 trees per acre. Succeed on thinner land than peach, with more clay, and thrive where the peach will. All succeed well nearly everywhere.
Read Plums and Plum Culture (Waugh), \$1.50.

Prices.

One to 5 of a variety at the "each" price.	Six to 39 at the "dozen" rate.	Forty or more of a variety at the "100" rate.
Sizes.	Each	Dozen 100
3 to 4 ft.....	.20	\$2.25 \$15.00
4 to 6 ft.....	.35	3.50 25.00

Red June. Early, ripens with early peaches; medium to large; good bearer; red all over; fruit pointed and flesh yellow, and very fine in quality.

Milton. A cross of Wild Goose with some Americana variety. Better in quality than Wild Goose, nearly as large. Bright red with small white dots, very handsome. Late bloomer, but ripens early, just before Abundance. Persistent to tree after ripening. Resists rot and curculio well.

Abundance. Medium if allowed to mature as the fruit sets on tree, but large when fruit is properly thinned. As this variety is inclined to overbear, it is best that the fruit be thinned by taking at least one-half to two-thirds the fruit off when size of small marbles, the remaining fruit will be of extra size to more than make the same yield. Roundish, skin yellow, washed with purple with a bloom; flesh yellow, juicy, sub-acid with apricot flavor, quality superb.

Gonzales. Fruit very large, meaty, of brilliant red; finest of flavor; good shipper and keeper. Tree very strong and immensely productive. Very valuable.

America. A hybrid of Robinson with Abundance. Tree very thrifty, symmetrical, spreading; fruit medium to large, bright golden ground with pink cheek, dotted white; flesh firm, stone medium to large, cling. Considered one of Burbank's best productions. Very valuable.

Wickson. One of Burbank's most remarkable hybrids; between the Kelsey and Simon plums. Very large, heart shaped; dark crimson, firm, of finest quality. Blooms very early, and will succeed in localities having late springs. Nothing finer in appearance or quality is known among plums.

Burbank. Large; clear cherry red; flesh deep yellow; very sweet and agreeable flavor. Very prolific.

CHERRIES

Plant 18 feet apart each way, requiring 135 trees per acre. Require very best drouth-resisting soil. They do better on limestone or gravelly soil than sandy soils. We grow only varieties of the Duke and Morello class (Sour Cherries), as they are the only classes that will succeed in this part of the South. The Sweet Cherries (Hearts and Bigarraus) are not successful here.

Prices.

One to 5 of a variety at the "each" price.	Six to 39 of a variety at the "dozen" rate.	Forty or more of a variety at the "100" rate.
Sizes.	Each	Dozen 100
3 to 4 ft.....	.20	\$2.00 \$14.00
4 to 5 ft.....	.30	3.00 20.00

Dyehouse. One week earlier than Early Richmond. Light colored with pinkish juice. Medium size with flattened ends. Tree small but vigorous with drooping branches.

Early Richmond. Light pinkish red, medium size, round. Successful over a greater range of country than almost any other variety.

New Century. Thought to be a combination of the Duke and Morello types. Originated in Gray-

son County, Texas. Fruit medium to large, light red of fair quality. Tree strong, upright, foliage rather broad, and free from mildew.

Baldwin. Originated in Kansas. Fruit large, round, dark but transparent red. Slightly sub-acid but rich.

English Morello. Latest to ripen of the sour cherries. Very dark red, size small. Hangs on tree well after ripening. Tree dwarfish.

APRICOTS

Plant 18 feet apart each way, requiring 135 trees per acre. Succeed best in limestone soil; bloom very early in spring. Should be treated like peaches. Very successful in most parts of the West on high ground.

Prices.

Sizes.	Each	Dozen	100
3 to 4 ft.....	.20	\$2.25	\$15.00
4 to 6 ft.....	.35	3.50	25.00

Moorpark. Large, yellowish green with brownish red on sunny side, marked with numerous dark specks, flesh bright orange, parts readily from the seed; grown largely for commercial purposes, especially for canning and drying. Tree vigorous and prolific. June.

Cluster. This valuable variety is claimed to have never missed bearing any season since its introduction. Originated in Texas, from seed of Russian apricot.

Royal. European, large, slightly oval, dull yellow with red next the sun, flesh orange yellow with rich, vinous flavor. An important commercial variety.

MULBERRIES

Plant 20 to 25 feet apart, requiring 109 trees per acre. Flourish in any soil or situation.

Prices.

One to 5 trees of a variety at the "each" price. Six to 39 trees of a variety at the "dozen" rate. Forty or more of a variety at the "100" rate.

Sizes.	Each	Dozen	100
2 to 4 ft.....	.15	\$1.50	\$11.00
3 to 5 ft.....	.20	2.00	15.00
4 to 6 ft.....	.25	2.50	20.00
5 to 7 ft.....	.30	3.00	24.00
6 to 8 ft.....	.40	4.00	30.00

Munson. One of the largest, most prolific and best mulberries of the Russian class. Originated by us, selected from among thousands of varieties grown from seed. The branches in fruit look like ropes of big berries. Earlier than Hicks.

Hicks Everbearing. Profuse bearer of fruit for three months; fine grower for shade; the best of all

trees for the fowl yard, as the fowls greedily eat the berries. Later than Munson.

Male Russian Mulberry. The flowers on this tree are nearly staminate but have rudimentary pistil, which sometimes metamorphoses and will set insignificant fruit, especially first season or two after transplanting, but after tree recovers from check of transplanting and gets into full growth, rarely any fruit sets. What fruit does set does not begin to compare in size and productiveness to the regular bearing sorts. This variety does not sprout like the non-fruited Paper Mulberry. This has a round head of compact form, well filled with leaves. The trees we grow are grafted, the same as the fruiting sorts.

FIGS

Hardy in South Texas. In North Texas unprotected tops will sometimes winter kill, but when frozen tops are cut off, new shoots will come and bear fruit late in summer of same season. Like rich garden soil. Plant 10 feet apart.

Sizes.	Each	Dozen	100
2 feet.....	\$0.15	\$1.50	\$12.00
3 to 4 feet.....	.25	2.50	20.00

Magnolia (Dalmatian). Large, light yellow with slightly brown cheek. Of excellent quality. Unusually productive. Fine for preserves.

QUINCES

Plant 10 to 12 feet apart each way. Quinces need very rich, deep, well-drained soil; they are better for careful culture.

Sizes.	Each	Dozen	100
2 to 3 feet.....	\$0.15	\$1.50	\$10.00
3 to 5 feet.....	.20	1.75	11.50

Meech. Very fine and prolific; none better in growth or quality of fruit.

PECAN TREES—GRAFTED VARIETIES

GULF COAST ORIGINATIONS

Prices.

Sizes.	Each	Dozen	100
Schley, Stuart, Van Deman, 1 to 2 ft.....	.50	\$5.00	\$40.00
Schley, Stuart, Van Deman, 2 to 3 ft.....	.75	7.50	60.00
Schley, Stuart, Van Deman, 3 to 4 ft.....	1.00	10.00	80.00

Stuart. Nuts large or very large, 1½ to 2 inches long, oblong with brownish shell, strongly marked with dark color. Shell of medium thickness and of very good cracking quality. Kernel full, plump, brightly colored. In quality one of the best, the flavor being rich and sweet. A heavy bearer. Tree a strong grower, reaching an immense size, with large foliage.

Van Deman. Large to very large, from 1½ to 2½ inches long, rather slender, pointed at both ends. Color reddish brown with purplish markings. Shell of medium thickness; cracking quality excellent. Kernel full and plump, bright brownish yellow; flavor sweet and good. Tree is vigorous, healthy, with large bright foliage. Altogether one of the most desirable varieties.

Schley. Size medium to large. 1½ to 1¾ inches long; oblong, somewhat flattened; light reddish

brown with a few small markings of purplish brown; shell thin, separating easily from the kernel; kernel full, plump, bright yellowish brown in color; flavor rich, nutty, in quality one of the best. Tree a good grower and on the whole a very excellent variety.

TEXAS ORIGINATIONS

Prices.

	Each	Dozen
Texas Prolific, San Saba.....	\$1.50	\$17.50
Hollis Seedlings, 2-yr., 2-ft.....	.35	3.50

San Saba Improved. A seedling of San Saba. This tree came in as a surprise, for we had about given up all hope of getting a better nut than the

See next page

PECANS—Continued.

original; but, after discarding thousands, our patience has been rewarded. The tree bears two weeks earlier, and commences the middle of September. The nuts, a third larger than the original variety, are much brighter in color, and the tree is a stronger grower. The nuts weigh 60 to the pound. Two-year old trees, **\$1.50 each.**

Texas Prolific. A seedling of San Saba; season of ripening medium. Trees of this variety are so precocious as to begin bearing the second year from the bud. The nuts are large, shapely, and of a beautiful color; the kind that is attractive. They fill up the barrel fast, and stand on their own merits. Texas prolific is the most difficult of all varieties to propagate, and this is why we doubt the ability of other nurseries to cut the price of the genuine stock. Trees at **\$1.50 each.**

The Texas Prolific and San Saba are two of the best productions of E. E. Risien of San Saba county, and for our higher altitudes we recommend them in preference to the "Coast" varieties.

Hollis or Jumbo. Discovered thirty years ago in Colorado River bottom, near San Saba, Texas. The tree is nearly 100 years old, 100 feet high, nearly 3½ feet in diameter. Has averaged 300 pounds of nuts per year for several years, selling for 50 cents per pound. These nuts have taken first prize at expositions at New Orleans, Paris, France, Chicago and St. Louis, besides many local fairs. Nuts medium large, oblong-blunt, dull yellowish brown, shell medium, full-meated, with fine separation. Flavor excellent.

Seedling Pecan Trees

These were grown from nuts of fair size and quality. They are recommended for shade trees where the fine large nut or paper shell quality is not so much desired.

Sizes.	Each	Dozen	100
2-year, 12 to 20-inch....	\$0.15	\$1.25	\$9.00

5-year, 5 to 7 feet.....	1.00	10.00	

Gathering Pecans

Cultural Note. Many fail to get satisfactory results in the transplanting of the pecan and persimmon, because they do not plant the trees in the right manner. Both the persimmon and pecan have long straight taproots, with few or no side roots and almost no fibrous roots; so it is difficult for such roots to get a hold of the soil unless one takes care and plant the tree in the right manner. A hole should be dug at least three feet deep, a post-hole digger is a good tool to use. Set the tree so that the entire root is under ground. (One great fault is that some leave two to five inches of the root above the surface.) Then fill in with nice, moist, pulverized soil, and tamp same so that the soil is forced into the pores of the bark of the root, being careful not to bruise the root while thus tamping. After the hole is thus filled up, then mound up about the tree with a mound of earth about a foot high and two feet across. This mound will gradually work away by cultivation. Then be sure and keep the tree cultivated all summer. If a post-hole digger is used, it would be well to spade up the ground about 8 inches deep in a radius of three feet around the tree before the mound is made.

PERSIMMONS

Hyachia

JAPANESE VARIETIES

These were introduced from Japan about seventy years ago. They are the royal fruit of Japan, their best native pomological product. Leaves are broad and burnished, the trees vary from shrubby growth of eight to ten feet high to a much larger size in different variety. Usually very prolific, often bearing at three years of age.

Prices.

Sizes.	Each	Dozen	100
1 to 2 feet, grafted.....	\$0.25	\$2.50	\$17.50
2 to 3 feet, grafted.....	.35	3.50	25.00
3 to 4 feet, grafted.....	.50	5.00	40.00

The following are the best Japanese varieties and all hardy here: **Costata, Hyakume, Hyachia, Triumph, Okame and Dia Dia Maru.** If no particular variety is wanted, just order Japan Persimmon and we will send best assortment.

CHINESE VARIETIES

Ta-mo-pan. (Meaning in Chinese "large grindstone.") Brought to the United States by the Department of Agriculture from the Ming Tombs Valley of North China, where it gets very cold. Tree grows rapidly and tall, as much so as the American Persimmon. Leaves nearly as broad as the Japan varieties. Fruit light orange yellow; free from astringency. Three to four inches in diameter, round and flattened at flower end, with a peculiar suture extending around it equatorially but near the stem end.

Prices.

	Each	Dozen.
1-year trees, 2 to 3 feet.....	\$0.35	\$3.50

Persimmons continued on next page.

PERSIMMONS—Continued.

AMERICAN VARIETIES

Josephine (American Honey). One of the very best of our native American persimmon in flavor and quality of fruit. Original tree grew in Missouri and was found by Samuel Miller.

Prices.

	Each	Dozen
1-yr. trees, 15 to 30 in. (grafted).....	\$0.35	\$3.50
1-yr. trees, seedlings.....	.10	1.00

HYBRID VARIETIES

Kawakami. A hybrid of the best native American with the Japanese. The fruit shows flavor of the Tomato shaped Japan type, but the flavor is that of the American with all of the pucker left out. The size is larger than that of the native, being about 2 inches in diameter. Tree almost as hardy as the native American.

Prices.

	Each	Dozen
1-year trees, 2 to 3 feet.....	\$0.35	\$3.50

Seedling Native Persimmons

We have grown some seedlings of the Native Persimmon of fair quality. These we offer at the following prices:

	Each	Dozen	100
6 to 10-inch trees.....	\$0.05	\$0.50	\$4.00
10 to 18-inch trees.....	.10	.85	6.00

PEACHES

Directions for Cultivating. A sandy loam is best suited to the Peach, but it will adapt itself to almost any soil, provided it is well drained. Plant one-year-old trees 18x18 feet; cut the tree back to 18 to 24 inches, as it is always best to have a low-headed tree. In the spring, after the growth has started, remove all but three branches and let these be distributed so that the tree will be well balanced. For the first two years fertilize with well-decomposed barnyard manure, or a mixture of one part of cotton seed or bone meal to two parts of acid phosphate. Apply 1½ to 2 pounds to each tree. After the third year, avoid nitrogenous fertilizers and use a fertilizer containing a good percentage of bone phosphate and potash and a small percentage of nitrogen. Prune every year by cutting off one-third of the previous year's growth. The head of the tree should be broad and open, so as to allow free circulation of light and air.

After tree is transplanted, we cannot emphasize the fact too much that it is quite important to cut the tree back to about at least 24 to 28 inches high, and to a single stem. This not only starts the tree off right, but also is quite a factor in getting a good successful stand to grow. We have seen peach trees from the same lot that were transplanted, and a part cut back. In the part that was cut back, every tree grew and made a vigorous growth. In the part that was not cut back, many of the trees did not start off, others were slow in starting off and made indifferent growth, while only a few made any sort of vigorous growth.

Borers. Go through your orchard in March and where you find gum around the surface, clean away the dirt and, with a knife or some sharp-pointed instrument, follow up the borers and remove them; then throw around the tree a small quantity of lime and ashes. This plan, if rigidly enforced, will keep borers down, give you better fruit, and greatly extend the life of the trees.

Thinning. When a tree sets an overload, it pays to thin out the fruit, even if two-thirds of the crop has to be taken off. It relieves the tree, and the remaining fruit will grow to be large, fine flavored, and handsome, whereas if the tree is left overloaded, the fruit will be small, inferior, of poor flavor. The thinning should be done just when the young fruit is about the size of marbles, and thinned out so that the peaches will be not less than 3 to 4 inches apart on the tree. The extra price for the thinned fruit will more than pay for the fruit destroyed.

PRICES

- 1 to 5 of a variety at the "each" price.
6 to 39 of a variety at the "dozen" rate.
40 to 300 of a variety at the "100" rate.
300 or more of a variety at the "1,000" rate.

Sizes	Each	Dozen	100	1,000
2½ to 4 ft.....	\$0.15	\$1.50	\$9.00	\$80.00
3 to 5 ft.....	.20	2.00	12.00	110.00
4 to 6 ft.....	.25	2.50	15.00	135.00
5 to 7 ft.....	.35	3.50	20.00	180.00

PERIOD I—MAY 20 to JUNE 5.

Mayflower. (North Carolina). Red all over, large, nearly free. Ripens 10 days ahead of Victor.

Early Wheeler. (E. W. Kirkpatrick, Collin Co., Tex.). White bluish cheek, flesh white, extra firm, with true clingstone flavor. The best shipper among early varieties. Cling, 50c each; \$5.00 dozen.

Elaeagnus Longipes,
Goumi

Here is a magnificent shrub, with leaves dark green above and silvery beneath, perfectly hardy, bearing a crimson, cherry-like fruit (with one small, lard seed), of refreshing, tart flavor, making an immense crop every year, ripening in May here. Price, 50c each.

Hardy Orange

(See under hedging plants.)

JUJUBE

This is a fruit introduced from China. There are many varieties, the same as our plums, some indifferent and some very good. The tree is handsome, having beautiful glossy green leaves, and a fruit at every leaf, making a beautiful ornamental tree. The fruit is shape of an olive, has dry pulp of good flavor, but very mild in acid, rather a nutty flavor. We have succeeded in growing some seedlings from one of the best varieties.

Prices: Two-year seedlings, 2 ft., 75c each.

PERIOD II—JUNE 1 to JUNE 10.

Triumph. (J. D. Husted, Ga.) Productive. Skin orange yellow, nearly covered with dark crimson, more fuzzy than Alexander and resists rot better. Flesh yellow, moderately firm, free when fully ripe. Better in quality than any ripening earlier. Seed small.

Mamie Ross. (John Ross, Dallas Co., Tex.) Sure, prolific. Skin rather fuzzy, creamy white with red cheek. Flesh white, rather soft, of fair quality, semi-cling. Seed medium. Has proven a profitable market peach.

Texas King. From East Texas. A peach of Mamie Ross type of better quality. The hardest in bud of any variety recorded, making it a very sure bearer. Fully as large and well colored as Carman. A favorite in New Mexico.

Dr. Burton. (Dr. E. L. Burton, Grayson Co., Tex.) Very vigorous and prolific. Small tit with sharp apex. Skin rather fuzzy, clear light creamy.

Continued on next page.

PEACHES—Continued.

mostly covered with pinkish red in dots, pencilings and blushes; brighter and more attractive than Mamie Ross. Flesh white, streaked with pink, much firmer and better in quality than Mamie Ross. In fact, the best ripening so early. Seed medium.

PERIOD III—JUNE 10 to JUNE 20.

Carman. (J. W. Stubenrauch, Limestone Co., Tex.) Very vigorous, sure and prolific. Skin creamy, covered with stripes and splashes of crimson, rather fuzzy. Flesh of better quality than Mamie Ross. The best peach of its season. Nearly free. Seed medium. A very valuable commercial variety.

Grimes. White cling, skin white, beautifully tinged with red. White flesh with very excellent flavor. Ripe June 20th to 25th. Resembles Mamie Ross in shape and appearance, from which it is supposed to be descended (second generation). A good shipper. Originated in Grimes County, Texas, by Theo. H. Graves of Anderson, Texas.

Slappy. (S. H. Rumph, Ga.) Prolific. Tit large, suture distinct, sides uneven. Skin quite fuzzy, rich lemon yellow, more than half covered with crimson. A bright showy peach. Flesh yellow with little red at stone, firm as Elberta, of better quality, perfectly free. Seed medium. The finest commercial peach, earlier than Elberta.

PERIOD IV—JUNE 20 to JULY 1.

Family Favorite. (W. H. Locke, Fannin Co., Tex.) From Chinese Cling crossed with some other good peach. Productive. Skin quite fuzzy, clear creamy white with rich pink blush on one side. Flesh white, tint of red at stone, free, excellent quality. Seed medium. Introduced by us in 1880, and has become a valuable standard.

General Lee. (P. J. Berckmans, Ga.) Sure and prolific. Tit broad and short. Skin creamy, one-half next to stem covered with mottled dull red, little fuzzy, much resembling Chinese Cling. Flesh white, red at stone, cling, quality excellent; firmer and better than Chinese Cling. Seed rather large.

PERIOD V—JULY 1 to 15.

Elberta. (S. H. Rumph, Ga.) Cross of Chinese Cling with Crawford Early. Sure and prolific. Nearly globose when fully developed, the largest specimens measuring 3x3, having little or no tit, suture shallow, sides nearly equal. Skin little fuzzy, orange yellow, more or less covered with crimson, according to soil and exposure. Flesh firm, of fair to good quality, sometimes a little bitterish. Freestone. Seed large. The leading commercial variety.

Munson Cling. (T. V. Munson, Tex.) From seed of Elberta. Equally prolific with Elberta. Tit broad, short, suture distinct, sides nearly equal. Skin fuzzy orange yellow, half covered with bright crimson mottling. Flesh yellow, firm as Elberta, of better quality, juicy. The showiest cling of its season, and the best. Seed large.

Chinese Cling. (Originated from seed brought from Shanghai, China.) Spreading habit, healthy, not very prolific. Probably the largest peach in cultivation. Skin creamy with short fuzz, mottlings of dull red covering one-third to one-half of surface next stem. Flesh white with little red at seed, tender, very juicy, slightly sub-acid. It is the parent of more fine commercial varieties than any other peach in cultivation, and yet not a valuable commercial variety itself.

Superb. (T. V. Munson, Tex.) From seed of Early Rivers crossed with Mountain Rose. Vigorous and prolific, one of the most resistant against late frosts. Tit very small or wanting. Skin creamy white, one-third to one-half covered with bright crimson. Flesh white with very little red at seed, firm, of best quality, freestone. Seed small. Fine reports of it from many places.

Munson Cling

PERIOD VI—JULY 15 to AUGUST 1.

Gold Dust. (J. C. Evans, Mo.) Prolific. Tit small. Skin quite fuzzy, orange, mostly covered with bright crimson, handsome. Flesh orange, very firm, a little red at stone, best quality cling. Very pretty.

Mathew Beauty. Large light colored yellow of best buttery flavor. Skin yellow ground with red check, making it a very handsome appearing peach. Freestone.

Champion. Large; skin creamy white, with red check; flesh rich and juicy. Ripens middle to last of July.

PERIOD VII—AUGUST.

Lady Lindsey. A seedling that came up in the yard of Mrs. George Lindsey of Greenville, Texas, and brought to our attention by L. L. Bowman of same place. Very large and attractive, having a rich red skin underlaid with yellow. Flesh of golden yellow, juicy and of fine quality. It ripens after the Munson Cling and before the Henrietta, filling in the gap between these two excellent clingstones, making a fine trio of yellow clingstone peaches. The tree is a good bearer, 50c each.

Columbia. (Mr. Cox, Ga.) Indian type. Skin mottled brown, underlaid with dull orange yellow. Flesh rich, yellow, buttery, high quality, free.

Ringgold. (Wilkins, N. J.) Seedling of Heath Cling and an improvement on that variety. Productive. Skin creamy white with streaks of blush near stem end. Flesh white to the seed, of best quality and sweet. Cling.

Henrietta. (Levy Late. Originated in Ky.) Tit prominent. Skin orange yellow, with crimson cheek. Flesh yellow, firm, sweet and of high quality. Cling. Very handsome.

Raisin Cling. (Coweta Co., Ga.) Supposed Columbia X Heath cross. Skin dull white, covered with mottled reddish brown. Flesh white, tinted with red. The finest quality of any cling known to us. Fine for sweet pickles.

Salway. (Thos. Rivers, England.) Skin rich yellow, covered with crimson. Flesh rich buttery yellow, fine for canning. Free.

THE STUBENRAUCH PEACHES

MANY are waiting and anxious to obtain trees of Mr. Stubenrauch's Peach originations, having learned of their good qualities. We are pleased to state that we have the rare privilege to introduce for Mr. Stubenrauch three of his best varieties, namely, the **Frank, Barbara, and Millard**, although we have but a limited stock of each variety for this season.

The history and descriptions are given in the following letter written by Mr. J. W. Stubenrauch: "Growing fine peaches has been with me almost a lifetime hobby. I started my first peach orchard in Texas (right where I am now), in the late 70's. Had at one time over 100 distinct varieties in bearing. "Out of these but few possessed real merit and general value. After experimenting for a number of years with the best of those of early days, shipping them to different markets, etc., the fact became clear that unless we got more reliable bearers and get the fruit to ripen after the usual early summer glut, the business would never be a paying one. I loved the work too well to quit, and yet to keep on the way I was going would land me eventually at the poor farm. As 'necessity is the mother of invention,' in my case something had to be invented or else go back to raising cotton.

"Among a lot of Elberta trees along the early 90's, there was one tree superior to all the rest, growing finer fruit, more of it, and producing more regular than the average of them. The thought occurred to me then, 'Why not cross pollenate this better type with some fine later peaches, and thus get some fine seedlings that ripen intermediate?' The work was started by planting some healthy Indian seedling peaches into which were inserted buds from that fine Elberta, and buds from Bells October, a very fine high quality late yellow freestone. When these fruited the seeds from the finest specimens were planted, and when these seedlings came into fruit many of them produced fruit superior in their makeup of both parents, the large size and fine appearance of the Elberta blending with the high quality in color and flavor of the Bells October. By selecting a dozen of the best were able to cover the entire season from Elberta to September in Central Texas.

"Among this selected lot were the **Millard, Frank and Barbara**. "The **Millard** comes a week after the Elberta. It is an immense size, red cheek, yellow skin and flesh Clingstone. Nearly round in shape, flesh quite firm and fine grained; when fully ripe it becomes melting and really delicious, none of the bitterness as found in the Elberta. "The **Frank** is a handsome yellow clingstone, large size, globular. Skin covered with rich red. It follows the Millard about a week and from 15 to 20 days later than Elberta. This peach has not failed to produce a crop here in twelve years. "The **Barbara** comes in a week after the Frank. It is a high colored, yellow fleshed freestone. Round shape and of high spicy quality of the Bell, while the tree has a larger blossom of the Elberta. It is a fine canning sort. Flesh firm, bright yellow with small seed. "One decided point in favor of these new seedlings is their regularity of bearing, much more regular than has been the case with our average old varieties."

T. V. Munson & Son
Denison, Texas

"Enclosed find picture of Grape Vines, taken in September. By referring to your order book you can see the vines were purchased of you March 25th and set out April 2nd. There are a number of the vines 16 to 20 feet long. Of course, you may not be interested in things after you sell them, but presume you like to know what success your patrons have. So far as I know, I never saw vines make such growth in so short a time. I did not lose a vine tho set very late."

L. Wood Johnson
(Collin County, Texas).

STRAWBERRIES

Plant 16 inches apart in rows, rows 3 ½ feet apart, requiring 9,000 plants per acre. Deep loamy sandy soil, with clay sub-soil is preferable.

Read Fuller's Strawberry Culturist. Price, 25 cents.

Prices.

	Dozen	100	1,000
On all except Ettersburg and Everbearing.....	.25	\$1.00	\$6.00
Ettersburg and Everbearing.....	.50	2.50	

Excelsior. Extra early, medium size, dark red, almost round, firm. Stem short. Fine shipper.

Saint Louis. Large, light red, showy. Plant hardy and stands drouth well.

Lady Thompson. Blunt top-shaped, medium to large, bright red, prolific but season short.

Klondike. Peculiarly suited to the great range of country over the Southwest. Large, bright red, and of fine flavor.

Aroma Late. Large, bright red, conical.

Everbearing. We have not fruited any of this type of strawberry. From reports it seems to make a good record in the northern states, but not as

good in the South, altho in some places it has proven quite satisfactory. We will keep a supply for those who wish them.

Ettersburg No. 80. The Ettersburg Farms in California have originated several new varieties of strawberries, embodying the blood of two and three distinct species. We have grown here about fifteen of these varieties and find No. 80 to be the best of the lot. The plant is robust and vigorous. The berry round, large and very dark red, giving a rich color to it. The flavor is far above the ordinary strawberry in quality. We have only a limited number of plants at 50 cents per dozen.

RASPBERRIES

Plant same distance as Blackberries. Need best drouth-resisting soil, on eastern or northern slope.

Prices.

Dozen, 50c; 100, \$2.50; 1,000, \$18.00.

BLACK-CAPS

Kansas. A very large excellent fruited black-cap, one of the best for a dry, hot climate.

RED VARIETIES

Cardinal. Very vigorous and prolific, dark red, very large. Originated in Kansas. Succeeding very well here. One of the most profitable varieties.

St. Regis. An everbearing sort, large berry and firm. Bears from April on thru to hot weather in the South, while it is claimed it will bear until frost in the North.

View at Vinita Home showing a 30-year-old American Elm. See Shade Trees, Page 25.

GRAPES

We Are Known the World Over For Our Grapes

It Will Be To Your Advantage To Get Your Vines From Headquarters

We Have a Very Large Stock of Well Grown Vines

CULTURE

We have prepared a pamphlet on the culture of grapes which is re-print of Chapter V and VI from "FOUNDATIONS OF AMERICAN GRAPE CULTURE," and consists of 20 pages. This pamphlet will be sent free to all of our customers purchasing grape vines to the amount of \$2 or more, if such is requested. If the pamphlet is desired, please so request it when sending in your order. To others it will be mailed for 25 cents.

The following are good books on the grape:	
"Foundations of American Grape Culture".....	\$2.00
"American Grape Growing and Wine Making".....	1.50
"Grape Culturist," Fuller.....	1.00

PRICES.

Unless one-year vines are specially ordered, we will fill all orders with two or three-year vines, if such are in stock, and fill with first-class one-year vines where we have no older vines of the variety ordered. The following prices are based on one-year vines, but we make no greater charge for the older vines. Either age will come into bearing at same time after transplanting.

1 to 5 of a variety at the "each" rate.				
6 to 39 of a variety at the "dozen" rate.				
40 to 400 of a variety at the "100" rate.				
400 or more of a variety at the "1,000" rate.				
Varieties.—(Here grouped for convenience in pricing. On the following pages they are described in order of ripening.)				

	Each	Dozen	100	1,000
PRICE, GROUP ONE:				
Concord, Delaware, Fern, Gold Coin, Headlight.....	\$0.10	\$0.85	\$5.00	\$40.00

DESCRIBED IN ORDER OF RIPENING

The varieties are named in the following descriptions in near the order in which they ripen as it is possible to do so. There is a variation from season to season. The prices for each variety are given above and there grouped for convenience in pricing, and no attention paid to order of ripening.

(Many of the varieties are given fuller descriptions and have full page illustrations in "FOUNDATIONS OF AMERICAN GRAPE CULTURE"—Price, \$2.00.

PERIOD I—LAST OF JUNE.

Headlight. Hybrid of Moyer with Brilliant. Vine slender, but more robust than Delaware, and making much longer vines, less attacked by mildew, leaves resembling those of Brilliant, but not so large; clusters small to medium, very compact, shouldered; berries clear, dark red, globular, medium or above in size, very persistent. Skin thin, tough; pulp tender, very sweet, almost equal to Delaware in quality and the finest in quality of any American grape ripening so early.
"Short arm," Price Group 1, Page 15.

PERIOD II—JULY 1 to 10.

Brilliant. (Lindley x Delaware.) Growth strong. Vine endures winters anywhere up to 15 degrees below zero. Clusters large, cylindrical, or

somewhat conical, often shouldered, open to compact. Berries large, globular, light to dark red, translucent, with a thin bloom, very handsome when well ripened; skin thin, rather tender, but seldom cracks; pulp meaty, yet very tender, melting, and delicious, usually preferred for table and eating fresh, to Delaware. Ripens just before the Delaware and yields on an average fully twice as much. It ships about equally as well or better than Concord.

"Medium arm," Price Group 3, Page 15.
Winchell. Sometimes confused with the Green Mountain, but the true Winchell is a distinct variety. Clusters and berry larger than Green Mountain, and of yellowish white. Green Mountain suffers easily from drouth by withering before ripening and for this reason we have dropped it.
"Short arm," Price Group 3, Page 15.

Ellen Scott. See Page 20.

GRAPES—Continued.

Manito. Hybrid of America and Brilliant. Growth very similar to America, endures extremes of climate very well. Clusters long, cylindrical, rather open, with long peduncle. Very prolific; berries medium, globular, persistent, dark purple, with white specks; very distinct and unique in appearance; skin thin and tough, pulp very tender, juicy, sweet and agreeable. Ripens very early, about with Moore Early, packs beautifully and ships excellently. A very profitable market grape, also a good wine grape.

"Medium arm," Price Group 2, Page 15.

Lomanto. Hybrid of Salado and Malaga. Vine vigorous, prolific, healthy, no rot or mildew; cluster above medium, conical, properly compact; berry very persistent, medium to large, spherical, dark purple or black, skin thin, tough; pulp melting, excellent quality; juice claret red. Valuable for limy soils and hot climate. See note under Nitodal.

"Medium arm," Price Group 3, Page 15.

Goeta. Parentage—America x R. W. Munson. Cluster large, berry large, black, handsome; skin thin, handles well; pulp tender, juicy, sprightly, far better quality than Concord. Vine very vigorous and prolific. Uses, market, table, red wine. Requires hot-dry weather to acquire high quality.

"Long arm," Price Group 2, Page 15.

Ladano. Hybrid of Salado and Headlight. Vine vigorous, healthy, foliage similar to that of Headlight; cluster medium, compact; berry medium or above, dark, clear purplish-red, translucent, round; skin thin, tough; pulp tender, melting, rich, pure and sweet. Fine for hot climate and limy soils. See note under Nitodal.

"Long arm," Price Group 3, Page 15.

President. Pure seedling of Herbert. Has a much better vine, which is strong, healthy and prolific. Flower perfect. Cluster medium, compact; berry large, black, persistent, does not crack. Ripens with Moore's Early and of far more value in the South than that variety. Quality excellent, much better than Concord.

"Medium arm," Price Group 3, Page 15.

PERIOD III—JULY 10 to 20.

Captivator. A cross of Herbert with Meladel, that is a combination of Rogers No. 44, his best black grape, Delaware, Goethe and Lindley. The growth is fairly vigorous, foliage less attacked by mildew than Delaware. Very prolific. Cluster above medium, cylindrical. Berry large, round, of a beautiful bright translucent pinkish red, no handsomer grape grown. Skin thin, tough, without cracking. Pulp melting, of exceedingly delicious flavor, nothing superior. We think this grape will make a marvelous record over a very extensive region. Should prove hardy as far North as Central Illinois, Ohio and in Massachusetts. Ripens with Delaware.

"Medium arm," Price Group 3, Page 15.

Delaware. Full historic description, page 143. Foundations of American Grape Culture, and illustrated on page 145, same book. Cluster medium, berry medium, bright red, juicy and of highest quality. Succeeds well in the South. Does not rot, but needs spraying to ward off Downy Mildew.

"Short arm," Price Group 1, Page 15.

Delakins. A cross of Delago with Perkins, that is, a combination of Delaware, Goethe and Perkins. It has the robustness of Perkins, the handsome cluster of the Delaware, but larger, and the size and shape of the berry of the Perkins. Ripens after Delaware.

"Short arm," Price Group 4, Page 15.

Rommel. Hybrid of Elvira and Triumph. Growth medium, endures climate better than Concord. Prolific. Slightly attacked by mildew in wet, sultry seasons, but less so than Delaware. Clusters medium to small ovate or cylindrical, often shouldered, compact, peduncle short. Berries large, globular, persistent, greenish yellow when fully ripe, skin very thin and delicate, too tender for long shipment, carries well 50 to 100 miles; very profitable for a home market grape, as it is always in demand on account of its most agreeable and fine eating qualities. Pulp melting and perfectly de-

licious when well ripened, but acid when under-ripe. Fruit rarely or not at all attacked by rot.

"Short arm," Price Group 4, Page 15.

Bell. A hybrid of Elvira with Delaware. Vine vigorous, healthy, free from mildew and leaf folder, very hardy, a good sure producer; cluster medium cylindrical, often with a shoulder, fairly compact; berry medium, round, greenish yellow, rarely attacked with Black Rot; skin thin, sufficiently tough to prevent cracking under ordinary weather changes; pulp rather tender, juicy, very sweet and agreeably flavored; ripens just before Concord.

"Short arm," Price Group 3, Page 15.

Herbeto. A seedling of Roger's No. 44, Herbert. Vine very vigorous, healthy, with foliage similar to that of Concord, endures the climate of Texas better than Concord, but more specially recommended for Northern states where something much better than Concord is desired. Flowers perfect, cluster of medium size, compact; berry very large, black. Ripens before Concord and far superior to it; much more persistent to the cluster, never cracks and hence a much better shipper. Very prolific. An improvement upon the Herbert, which was regarded as Roger's best black hybrid. Illustrated, page 159, Foundations of American Grape Culture.

"Short arm," Price Group 3, Page 15.

Wapanucka. (Rommel x Brilliant.) Growth medium to strong, equal with Concord. Cluster medium to large, cylindrical, shouldered, properly compact; peduncle short to medium. Berries large, five-eighths to seven-eighths inch in diameter, globular, persistent, rich yellowish white, translucent; skin very thin and delicate. Ripe about with Delaware. Far superior to Niagara and Green Mountain. For nearby market and table grape there is no other variety superior, if equal to it. Very prolific.

"Short arm," Price Group 3, Page 15.

Nitodal. Salado hybridized with Malaga. Vine vigorous, healthy, cluster medium to large, conical, handsome; berry persistent, above medium, translucent, dark red; skin thin, never cracks; pulp melting, pure, fine juice pale pink. Altogether very attractive and valuable; especially in limy soils and hot climate. This grape comes out of the species *Vitis Champini* of Southwest Texas which possesses endurance against climatic hardships in the South superior to any other species. This applies as well to Lomanto, Salamander, which are also bred out of this species by two generations of breeding. The parent, Salado, is a hybrid of one of the best *Vitis Champini* varieties with Brilliant.

"Long arm," Price Group 4, Page 15.

PERIOD IV—JULY 20 to AUGUST 1.

Salamander. A combination of Salado, Delaware and Lindley. Vine very vigorous and healthy, enduring drouth perfectly and 15 degrees below zero of cold. Prolific, of medium handsome, compact clusters of good, medium translucent red berries, having thin tough skin, melting pulp of quality about equaling Delaware.

"Medium arm," Price Group 4, Page 15.

Lukfata. (*V. Champini* x Moore's Early.) Growth strong, endures heat, drouth and cold remarkably well. Succeeds in black, limy soils. Not injured by mildew. Cluster medium, ovate, sometimes shouldered, compact; berries globular, large, persistent; does not crack; pulp same as Moore's Early, more juicy and very sweet and agreeable.

"Long arm," Price Group 3, Page 15.

Beacon. Big Berry Post-Oak x Concord.) Growth medium in South Texas, becoming stronger in North Texas, to very strong in Missouri. Very prolific, of large cylindrical clusters, often shouldered, moderately compact. Berries as large or larger than Concord, black, with rather heavy white bloom, hang to cluster about equally well with Concord, but not so well as Bailey; skin a little tougher than Concord, never cracks; pulp rather more tender than Concord, very juicy, sprightly and of a very similar flavor to Concord.

"Long arm," Price Group 3, Page 15.

Concord. Cluster medium to large, berry large, black with bloom. A well-known grape. Better North than South. In the South it does not ripen evenly.

Fern Munson Grape. See Page 21

GRAPES—Continued.

"Medium arm," Price Group 1, Page 15.

Niagara. Clusters large, compact; berry large, yellowish-green; skin tender; pulp juicy, better in quality than Concord, but not so good as Diamond. Needs spraying to ward off Black Rot. Better North than South, but succeeds better in the South than Concord.

"Short arm," Price Group 3, Page 15.

Ericson. Seedling of America crossed with R. W. Munson. Cluster medium to large, compact and attractive. Berry medium, black. Skin thin and tough. Seeds small. Fine for table and wine. The vine is hardy, healthy and vigorous, and resists attacks of insects well.

"Medium arm," Price Group 3, Page 15.

R. W. Munson. (Big Berry Post Oak x Triumph.) Growth strong. Clusters medium to large, cylindrical, often shouldered. Berries when well grown, medium to large, globular, persistent; black without bloom; skin never cracks; pulp tender, juicy and of a very good quality, better than Concord or Beacon. Gives good satisfaction on market. Bears heavily on long pruning and when pollinated by other erect stamened varieties flowering at same time, its own pollen not being fully adequate, although its flowers are perfect. Concord and Brilliant good pollinators for it.

"Long arm," Price Group 2, Page 15.

Salern. (Rogers.) Medium cluster, large red berry, quality good.

"Short arm," Price Group 3, Page 15.

PERIOD V—AUGUST 1 to 10.

Captain. Parentage—America crossed with R. W. Munson. See description of these. Clusters very large; long cylindrical, reaching 10 to 12 inches; berry large, black with white bloom; skin thin; ships well; pulp tender, quality much better than Concord. Exceedingly vigorous and prolific. Uses, market, table, red wine. Use Concord or Krause, as pollinators.

"Long arm," Price Group 2, Page 15.

Xinta. (America x R. W. Munson.) Growth strong. Clusters large, cylindrical, shouldered, with medium peduncle, fairly compact, unless not well pollenized, then loose; flowers have reflex stamens and perfect flowering kinds should be planted near, such as Brilliant, Delaware or Gold Coin. Berries medium to large, globular, persistent, black, with little bloom; skin thin, never cracks; pulp meaty, tender and of a very agreeable, sprightly quality. Very prolific. An excellent market and wine grape.

"Long arm," Price Group 2, Page 15.

Mericadel. A hybrid of America with Delaware. Vine very vigorous and very productive; cluster large, berry medium, purple, very persistent to cluster; skin thin and tough; pulp tender and meaty, of very best quality; fine for table and market. Ripens late, after Concord. Doing finely in Florida and Southeastern part of United States. Pronounced of the best quality by many who have taken part in our "grape-tasting parties."

"Medium arm," Price Group 2, Page 15.

Champanel. (V. Champini x Worden.) Growth rampant, exceedingly resistant to heat and drouth, growing well in limy black soils. Clusters large, conical, with long peduncle, rather open. Berries globular, large, black, with white bloom, persistent; skin thin, tough; pulp tender, juicy, very sprightly, acid unless well ripened, then quite agreeable.

"Long arm," Price Group 3, Page 15.

Amethyst. Parentage—Delago x Brilliant. Cluster medium; berry large, clear red, with delicate bloom; skin thin and tough; pulp tender, quality the best.

"Short arm," Price Group 4, Page 15.

Dr. Collier. Ten Dollar Prize Post-Oak and Concord Hybrid. Vine vigorous. Cluster large, conical, not very compact; berries large, globular, clear handsome red, persistent, does not drop or crack; skin thin; flesh a little pulpy, very juicy. Should be thoroughly ripe, otherwise rather acid; good quality.

"Medium arm," Price Group 4, Page 15.

Extra. (Big Berry Post-Oak x Triumph.) Growth strong; cluster oblong to cylindrical, sometimes shouldered, moderately compact. Berries

persistent, globular, medium to large, dark purple to black, with moderate bloom; skin thin, tough, never cracks; pulp tender, juicy, sprightly, agreeable, sweet.

"Long arm," Price Group 3, Page 15.

Ben Hur. Parentage a combination of Post-Oak grape with Norton and Herbemont. Vine very vigorous, very prolific, free from rot and mildew; cluster large; berry little under medium, black, persistent; pulp very tender, juicy, sprightly, sweet. We consider this one of the most valuable of American wine grapes.

"Long arm," Price Group 3, Page 15.

Krause. This was produced from seed taken from sample clusters of a variety produced by Prof. E. W. Krause of Waco, Texas. Supposed to be a hybrid of Herbemont and Niagara. Vine is vigorous, usually healthy, slightly attacked by mildew in damp seasons. Very prolific of large handsome clusters of pearly white berries of medium to large size, of fine quality. Very handsome in basket and sells at highest price. Promises to be an exceedingly valuable grape for all of the Southwest. We have named the variety in honor of Prof. Krause, who did valuable work in hybridizing grapes. Illustrated page 150, Foundations of American Grape Culture.

"Short arm," Price Group 4, Page 15.

PERIOD VI—AUGUST 10 to 20.

America. (Seedling of Jaeger No. 70.) Growth very strong. Cluster conical, sufficiently compact. Berries very persistent, medium size, globular, black, with little bloom, and scatteringly dotted jet black, with white speck in center of dots; skin thin and tender, but does not crack; pulp melting, juicy, easily freeing the slender seeds, when fully ripe very rich in sugar; also rich in agreeable acid; possesses a very distinct, peculiar flavor, much liked by some; not "foxy," making a good combination market and wine grape. A very good

**President**

GRAPES—Continued.

port wine has been made from it without "fortifying." Very prolific with long arm pruning and when pollenized by other varieties, as it does not thoroughly pollenize itself. Beacon is a good mate.

Price Group 3, Page 15.

Bailey. (Big Berry Post-Oak x Triumph.) Growth strong. Clusters large to very large, cylindrical or often branching, generally compact. Berries persistent, large, black, with little bloom; skin thin and tough, never cracking; pulp meaty, but not tough, juicy, sprightly, of pure very good quality, considerably above Concord. A valuable market grape, easily superseding Concord, especially in South-Central and Southwest Texas, where it has done remarkably well.

"Long arm," Price Group 4, Page 15.

Blondin. Combination of Ten Dollar Prize Post-Oak, Norton Virginia and Herbemont. Cluster large, compact, shouldered; berry medium, white translucent; skin very thin and tough; pulp very tender, juicy, sprightly, quality excellent, nearly best. Very vigorous, prolific. Late, with Triumph and Catawba in season. Very valuable as a late market and white wine grape.

"Long arm," Price Group 2, Page 15.

Valhalla. A hybrid of Elvicaud and Brilliant. A very vigorous drought-enduring, prolific vine, well suited for black lands and will endure Missouri winters. Cluster medium; berry large, bright clear red; thin, tough skin; tender, juicy pulp of quality nearly equaling Brilliant. Hangs on perfectly; never cracks or rots.

"Medium arm," Price Group 3, Page 15.

Wine King. A hybrid of Winona and America. Winona is a pure seedling of Norton Virginia, and quite an improvement on that celebrated variety, hence Wine King is a thoroughlybred pure America blood of the finest wine properties and large enough in berry and cluster to make a good market grape. Cluster large, berry medium, black, very persistent. Skin thin, never cracks, pulp tender and juicy, rich and sprightly, intensely red juice. Very vigorous, prolific; free from all disease.

"Long arm," Price Group 4, Page 15.

Manson. An exceedingly valuable white grape. A hybrid of R. W. Munson with Gold Coin, produced in 1899. Vigorous and productive; clusters large, berry above medium, of yellow color; skin thin and tough; pulp tender, quality excellent. Ripens with Triumph.

"Short arm," Price Group 3, Page 15.

PERIOD VII—AUGUST 20 to 30.

Catawba. Cluster medium, conical; berries above medium, clear dark red, globose; skin thin, tough; pulp rather tender, juicy, sprightly, with a slight Muscat flavor, not foxy. Excellent for table and wine. Does well North and fairly well South.

"Medium arm," Price Group 2, Page 15.

Ellen Scott. Armlong hybridized with Herbemont. Vine beautiful, healthy, vigorous, prolific. Suitable to the South as far north as St. Louis and Cincinnati. Cluster large to very large, conical. Berry large, translucent, violet covered with a delicate bloom. Skin thin and tough. Pulp tender, very juicy and sprightly, of pure high quality, reminding one of the best foreign grapes. A very handsome table and market grape. Ripens after Catawba. This grape ought to be especially valuable in West and Southwest Texas, where the European varieties will grow, and we believe will become a valuable commercial variety for those regions, as well as regions farther north and east. We anticipate for this grape a great future, and believe we have produced no grape of greater value.

"Long arm," Price Group 2, Page 15.

Armalaga. A hybrid of Armlong (which is a hybrid of native Post-Oak grape with Black Eagle) and Malaga. The vine is vigorous and healthy. Flower perfect. Cluster large and compact. Berry large, yellowish-green, translucent, persistent to cluster. The skin is thin, tough, yet pleasant to taste, without astringency. It endures shipping as well as Tokay. In quality equal to the best foreign grapes. This promises to be very valuable in all of the drier portions of the Southwest, as it is much harder than pure Vinifera kinds. Its fruit would be taken by anyone not acquainted with native

**Bailey.**

blood as a pure foreign grape and will sell equally well with such while the vine is immensely superior to any of the foreign. Its quality is much richer than Malaga.

"Medium arm," Price Group 3, Page 15.

Edna. Hybrid of Armlong with Malaga, and similar in every way to Armalaga, although the vine is more vigorous. Clusters larger and as handsome as Armalaga.

"Long arm," Price Group 2, Page 15.

Carman. (Post-Oak No. 1 x Triumph.) Growth vigorous; foliage never attacked by leaf folder or mildew; very prolific. Cluster large to very large, shouldered or branched, conical, very compact. Berries persistent, medium, globular, black with thin bloom; skin thin and tough, never cracking; pulp meaty, firm, yet tender when fully ripe, of pure, rich quality, much superior to Concord.

"Medium arm," Price Group 3, Page 15.

Augustina. Combination of Delaware, Goethe, Brilliant. Cluster large; berry very large, translucent carmine red, very handsome; skin thin and tough; pulp meaty, tender and juicy, quality the best, with very delicious characteristic flavor. Plant 8 feet, short arm pruning. Spray.

Price Group 4, Page 15.

Xenia. Parentage: Delaware, Goethe and Triumph. Clusters medium, compact, very large, white; skin thin and tough; pulp meaty, tender, highly flavored, best. Good grower, prolific. Short arm pruning.

Price Group 3, Page 15.

Ronaldo. Armlong-Malaga hybrid. Of the same general character as Armalaga, only the vine more vigorous and larger clusters. Ripens week later than Armalaga. White.

"Long arm," Price Group 2, Page 15.

Columbian. Seedling of Isabella, and first introduced as Union Village. Clusters small; berries immensely large, purple. Quality fair. Ripens unevenly. Its extreme large berries make it a novelty for those who wish large berries to be the prime object. Fine for jelly.

"Medium arm," Price Group 3, Page 15.

Gold Coin. (Norton x Martha.) Growth medium. Cluster medium or above, ovate shouldered, proper degree of compactness. Berries large, globular, yellowish when fully ripe, persistent; skin thin, tough, never cracks, and rarely attacked by rot; pulp about same consistency as Concord; very juicy and exceedingly sweet; retains a little of the Martha flavor; liked by most persons. Very handsome in the basket and markets excellently.

"Short arm," Price Group 1, Page 15.

GRAPES—Continued.

Escol. Introduced into the United States from Palestine by General Lew Wallace. Immensely large cluster. Berries very large, ovoid, purplish black, very firm and meaty, hence a fine shipper. Does not crack. Very handsome and showy grape. Belongs to Vinifera class.

"Short arm," Price Group 4, Page 15.

Muscat Rose. A Vinifera variety and one of the most hardy of that class. Large cluster, large red berries resembling Tokay, pulp meaty, high quality.

"Short arm," Price Group 4, Page 15.

PERIOD VIII—SEPTEMBER.

Grapes in this period, while ripening here the last week of August and first week in September, will hang on for several weeks without deteriorating, as the nights are cool and birds have left.

Jacques. (Le Noir, Black Spanish.) Very prolific. Cluster rather open, but long and large. Berries small, very juicy and sprightly. Fine for red wine. Does well in Southwest Texas in semi-arid regions. In moister regions required spraying to keep off mildew and black rot, to which it is subject.

"Long arm," Price Group 3, Page 15.

Herbemont. Vine very vigorous, healthy and longlived in the South. Clusters large; berries small to medium, brownish red or translucent purple, not coloring much when in dense shade of foliage. Juicy and sprightly. Fine white or amber wine. Much subject to black rot, which will have to be kept in check by spraying. Well adapted for the South and only as far north as Kansas, as winters with 15 degrees below zero and colder will damage it.

"Long arm," Price Group 2, Page 15.

Muench. A hybrid of Neosho (a Missouri Post-Oak grape found by H. Jaeger) and Herbemont. Vine very vigorous and free from all disease; clusters large to very large; berries above medium, purplish black; pulp very tender and meaty, of fine quality. Sells readily in the market, also fine for table.

"Long arm," Price Group 2, Page 15.

Fern Munson. (Post Oak No. 1 x Catawba.) Growth very strong. Cluster medium to large with long peduncles. Berries globular, medium to large, very persistent; very dark purplish red to nearly black; skin thin, tough; pulp firm, but not tough; very juicy, sprightly, with very agreeable Catawba flavor when fully ripe; seeds leave the pulp readily. Very profitable, as it ripens when all old varieties are gone. Free from black rot. Has endured 27 degrees below zero and has borne well the following season. It endures drouth excellently.

"Long arm," Price Group 1, Page 15.

Last Rose. A hybrid of Armlong and Jefferson. Vine vigorous, healthy and prolific. Cluster very large, compact, long peduncle, conical, with heavy shoulder. Berry medium to large, dark bright red, round. Pulp tender, of very good quality. Ripening later than the Fern Munson. Adapted to the same regions as the Ellen Scott. A very handsome market grape.

"Long arm," Price Group 2, Page 15.

Albania. Parentage: Post-Oak x Norton x Herbemont. Cluster large to very large, shouldered; berry medium, translucent white; skin thin and tough; pulp very tender and juicy, sprightly, with Herbemont character, but sweeter; very vigorous and prolific; uses, late market, table and white wine. Plant 10 to 12 feet, and give long arm pruning, as described on page 226, Foundations of American Grape Culture.

Price Group 3, Page 15.

THOSE NEWEST CREATIONS

AS ANNOUNCED in our 1916-1917 catalog we would probably introduce some of the very choicest of the new seedlings from the last lot of seed saved by the late T. V. Munson. In keeping with this announcement, it has been hard to determine which few out of about 20 of the very best to introduce. In the lot of seedlings there are some 60 new ones, all worthy of notice and propagation, but as some are similar to the fine varieties now already introduced, we did not consider them further, but confined ourselves to about 20 that even excel those heretofore brought forward as the very best in grape creation. For this season we have named five and are prepared to introduce a few vines of four of them. On account of the limited number of vines, we will not sell more than one vine to a party, as we wish to make the vines go as far as possible. In another season or two, we expect to be able to increase our propagation of same.

ELEANOR

(Record symbol R4PIV5.) This is a seedling of Rothenol (which is a cross of Armlong with Jefferson) crossed with some other former originations of T. V. Munson, not named. The cluster of medium size, berry medium to large. Color of a rich red with such uniformity of ripening that it is very beautiful. The flavor of the grape is of the highest quality. The pulp quite tender, the skin is thin but quite tough so that it will be a fine shipper. It ripens at a season when most red grapes are gone and on this account it is doubly valuable. Ripens with Edna.

VOLNEY

(Record symbol R5PIVI.) This is a seedling of Ellen Scott apparently crossed with Muscat Rose. The color is about that of Ellen Scott. The cluster very large, berry large and slightly

oval. The flavor is much like that of the Vinifera type and very delicious. A week later than Ellen Scott.

MATHILDA

(Record symbol R8P3V3). Seedling of Violet Chasselas, probably crossed with Brilliant. Large, handsome cluster of above medium red berries. The berry is firm but very tender pulp. The quality of the very best. This has been noted every year since it began to bear and checked each time for a top-notch.

MARCUS

(Record symbol R4PI3VI.) Seedling of Ellen Scott crossed apparently with Escol. The cluster is large and cylindrical with beautiful large red berries. The flavor is of the best and sweet, pulp very tender.

NEW GRAPES—Continued.

All four of the above are red grapes and all are unusually attractive and of the highest quality. They are named for the grandchildren of the late T. V. Munson, as these grapes might be considered grandchildren of the first originations of T. V. Munson.

PRICES

Price of above varieties, \$1.00 per vine.

MINNIE

(Record symbol R4P6V2.) (Named for Minnie Secoy, wife of Will B. Munson). In the lot of the new seedlings there were many extra fine white grapes, but as we already had a fine lot in the collection, consisting of Armalaga,

Edna, RONALDA, Blondin, all of about the same season, we did not wish to introduce but one more white of same season, and it was a hard matter to select the best of about six extra choice that we had picked out. But the choice fell on the very best and most handsome of the lot. Minnie is a seedling of Edna, probably crossed with Longfellow. The cluster is large, conical and handsome. The berry is white covered with a peculiar bloom that makes the fruit look as tho it were frosted, which adds much to its attractiveness. The berry is large. The pulp is tender and the quality of the very best. Sorry to say that we have no vines of this variety this season, but are introducing it at this time so that it may not be overlooked in making up our list next season, at which time we will expect to have a few vines.

SOUTHERN MUSCADINES and HYBRIDS

Succeed in deep rich soil throughout the South. Require much high trellis room. Plant 16 to 20 feet apart in rows. Require little or no pruning. Fruiting varieties, to render them fruitful, need male vine growing near to pollinate them.

A most excellent work on the Muscadine Grape has been published by the United States Department of Agriculture, entitled THE MUSCADINE GRAPES by Geo. C. Husmann and Chas. Dearing. It is a bulletin of 60 pages with numerous high grade half tones and colored plates. We have no copies of this bulletin for distribution, but if you send 25 cents to Superintendent of Documents, Government Printing Office, Washington, D. C., and ask for "Bureau of Plant Industry Bulletin No. 273, Muscadine Grapes," a copy will be sent you if still in print. Also Farmers' Bulletin, April, 1916, No. 709.

PRICES

	Each	Dozen
Scuppernong, Thomas and James	\$0.30	\$2.75
La Salle, San Jacinto.....	.35	3.50
San Rubra.....	.75	7.50
Male Muscadine.....	.40	4.00
Muscadine Seedlings.....	.20	2.25

James. Black, of large size, 5 to 7 berries, which seem to hold in cluster better than most pure muscadines. Skin thick but flavor good.

Thomas. Very large, black, two to five berries to cluster, not persistent. Best of the pure black muscadines. Good wine.

Scuppernong. Large bronze yellow, juicy, good wine. Four to six berries to cluster.

The following are hybrids of the Scuppernong made by us. The La Salle and San Jacinto being of the first generation and the others of the second generation from the Scuppernong.

La Salle. Hybrid of Muscadine and Post Oak. Large, black berry with 6 to 15 to cluster and more persistent than Thomas. Skin thin, pulp tender and better quality than Scuppernong. Earlier to ripen of this class.

San Jacinto. Berry above medium. Cluster a little more filled than La Salle, about three times the size of Scuppernong. Quality a little better than La Salle and follows it in ripening. Very prolific. Same blood as La Salle.

Sanrubra. Hybrid of San Jacinto and Brilliant; about the same size as in San Jacinto; berry not quite so large as Scuppernong; much more persistent to cluster; skin quite thin, but never cracking; pulp melting and of best quality. Nearly as sweet as Sanalba; a great acquisition. Very vigorous and productive.

Male Muscadine. To pollinate the bearing varieties to render them fruitful. One male for each six or less bearing vines will answer if all are in the same plat. At least one male should be in each plat, and one male for each six bearing vines when there are many bearing vines in the row.

Muscadine Seedlings. These are grown from seed of La Salle, San Jacinto, and Scuppernong. The above named varieties grew near together with Albania, Armalaga and Gold Coin grapes near by. The seedlings may be pure and some may be hybrids. This cannot be determined until they fruit. Some may be staminate or male vines. We offer these seedlings only to those who wish to experiment. Some of them may prove extraordinary.

"My order of trees received the 3rd; planted the 4th. All O. K. and in good shape, well packed. Stock looked fresh and healthy. Truly, I never have been better pleased with an order. Enclosed find another order."

Tobias Knudson
(Bosque County, Texas).

ROSES

DIRECTIONS FOR PLANTING, PRUNING AND FERTILIZING

ANY good garden soil is suitable, but should be well fertilized with decomposed stable manure. Keep the soil free from weeds and stir frequently during the summer. Mulching in fall with stable manure is beneficial. A small amount of bone meal or good fertilizer applied in summer is advisable.

WHEN PLANTING, cut off all but two or three of the strongest branches; cut these back to 3 inches. Plants thus cut back will transplant better and produce finer flowers.

PRUNING. After the first killing frost, most of the varieties should have two-thirds of the past year's growth cut off. As a general rule, the more vigorous the variety the less it should be pruned. Remove all decayed wood. Climbing Roses should have only their side branches shortened in; do not disturb the main stem.

WE FREQUENTLY receive complaints from our patrons who order late in the spring; they state the flowers produced on their roses are very inferior and do not come up to description. We would state that perfect flowers cannot be expected from plants set out late in February or March, and which produce blooms before they are well established. But if these plants are allowed to grow until the following fall, and if they receive the proper treatment, there will be no cause for complaint.

Read Henderson's Practical Floriculture. Price, \$1.50.

"HOW TO GROW ROSES." Revised and Greatly Enlarged. By Robert Pyle. A new book of 120 pages, 5x8 inches, of which 16 illustrate leading Roses in natural colors. All the necessary instructions which will be of value to the amateur are presented in clear, simple and concise form, where, when and how to plant. Fertilizers, Insecticides, Planting, Pruning, Mulching, Winter Protection, with important lists of the best Roses for every imaginable place and purpose. The Calendar of Operations alone may save you the cost of the book. Price, \$1.00, postpaid.

THE PRACTICAL BOOK OF OUTDOOR ROSE GROWING. By George C. Thomas, Jr. If you love roses and grow them, or desire to, you will need the explicit and authoritative instructions covering every phase of the subject in this work, the result of 15 years' close study of rose growing for the home gardener. Location, ordering, planting, cultivation, etc., are all made easy with charts and text, and the 96 PERFECT REPRODUCTIONS IN FULL COLOR and some half-tone plates of all kinds of roses. You will get big value in this beautiful large octavo volume, bound in handsome cloth, gold stamped, in a slip case. \$4.00 net, postage extra.

STRONG, OPEN GROUND GROWN PLANTS

These have been growing all summer in the field, having been transplanted a year ago from strong plants growing in pots. All are on their own roots, and hence will not sucker or sprout like budded roses. All are vigorous, strong and healthy. There is a difference in size and weight between varieties, altho grown on same soil during same time and under same conditions, for example an Aurora will be much heavier and larger than Sunburst of same age grown under same conditions; it is a variety characteristic that soil conditions do not overcome.

The following list includes the best and most superb varieties out of a list of many hundreds. The list includes the best of each color, so that the list is representative of all types.

EVERBLOOMING WHITE AND BLUSH.

Clothilde Soupert. Vigorous, profuse bloomer, with medium, very full, white flowers, with pink center.

The Queen. Pure snow-white; sweet and fragrant; petals are thick; makes fine buds on long stems; good grower.

Antoine Revoire. Very handsome Camellia form. Outer petals almost white, gradually becoming flesh pink toward center; robust, healthy.

Kaiserin Augusta Victoria. Pure white, fragrant; fine buds and flowers on long stems; profuse; strong grower.

White Cochet. Identical in shape and habit with that splendid pink rose, Maman Cochet, except the color is white, changing to blush.

Carnot. Flesh-tinted white. Long beautiful bud, cupped, wax-like.

Frau Karl Druschki. An everywhere hardy, vigorous grower, with bright green leaves, delicately veined; splendid long buds and magnificent snow-white blooms with large saucer-shaped petals. Rightly named and deservedly a prize winner.

BUFF AND YELLOW.

Etoile de Lyon. Rich, yellow, full, fragrant pretty; profuse all summer.

Blumenschmidt. Pure citron-yellow; outer petals edged tender rose. A sport from Mademoiselle Francesca Kruger, which it resembles in form.

Marie Van Houtte. Canary-yellow, deeper center, the border of the petals tipped with bright rose; large, full and fine form, a free and continuous bloomer.

Sunburst. The color is orange-copper or golden-orange and golden-yellow; edge of petals lighter; all intense shades, extremely brilliant in effect.

Madame Jenny Gillemot. Buds long and pointed, deep saffron yellow, opening canary with dark golden shadings; blooms large, petals immense; opens very freely; a fine upright grower of branching habit. Exquisitely beautiful; very large in size; bud very long and pointed.

Madame Bardou Job. (F. Dubreuil, 1914.) (H. T.) Chrome and canary citron-yellow, very distinct and striking; opens well to large and full cupped form; vigorous and free on upright, stiff stems, with beautiful leaves. Seedling from Prince de Bulgarie.

ROSES—Continued.

PINK.

Catherine Mermet. Clear, shining pink with rich amber center; elegant buds and large globular flowers; handsome bush with dark green leaves. A parent of Bridesmaid and The Bride.

Madame Caroline Testout. Brilliant satiny-rose, deepening at center and bordered with silvery-rose; immense broad petals and extremely large flowers. The famous rose of Portland, Oregon.

Ophella. A fine grower, with big, bright foliage that shows at a glance that it is a variety that will hold its flowers well. It is long-stemmed, bushy and free branching, and a free producer of bloom. It is very fragrant and resembles Richmond in this respect. Color clear, bright pink, suffused yellow.

Duchess of Albany. (Red La France.) Two shades darker than its parent, the Pink La France, of which it is a duplicate in size, form and habit.

La France. Silvery-rose, with pink shades and satin-like petals of unsurpassable beauty; large, symmetrical and deliciously fragrant; blooms from June until frost; hardy with protection.

Jonkheer J. L. Mock. Clear imperial pink. Reverse of petals, rosy, silvery white; blooms of large size and form produced on stiff erect canes. Of La France type but much stronger.

Maman Cochet. Rose or pink, shaded with salmon; profuse, fine bud and flower; strong grower; a very superior rose; one of the best for outdoor planting in Texas, also excellent for cut flowers.

Aurora. One of the grandest of all Hybrid Tea Roses. Color clear, bright pink, full and double to the center.

F. R. Patzer. A most beautiful and distinct Rose of very free flowering character. The blooms are produced with great freedom on stiff stems, and are of large size and substance. The color is creamy-buff, back of petals delicate warm pink; as the petals reflex the color becomes light orange-pink, forming a most charming combination. Valuable for garden culture.

William Shean. A fine grower, throwing up long, stiff canes, crowned with large pointed flowers of purest Killarney pink, full, free, and a perpetual bloomer. Immense size, perfect form and substance. Altogether a glorious Rose.

William R. Smith. (Charles Dingee, Jeanette Heller or Maiden's Blush; Smith, 1908.) Creamy-white with shadings of pink; a seedling from Maman Cochet and Kaiserin Augusta Victoria; beautiful in form and colors; glossy foliage; long, stiff stems; vigorous in growth; a superb summer bedder and hardy with light protection.

Paul Neyron. The largest of all Rose blooms; bright, shining pink, clear and beautiful; very double and full; finely scented; blooms first season and all summer. Grows to a great height in a single season and stems are almost thornless.

SCARLET AND CRIMSON.

Meteor. Intense velvety-crimson, buds and blooms large, elegantly formed, fully double and borne on nice, long stems, with healthy, bright foliage of the deepest green. Brilliant and highly popular.

Etoile de France. (Star of France.) A brilliant shade of clear red-crimson velvet, centering to vivid cerise; large flowers on long, stiff stems; remarkably vigorous, free-blooming and hardy. Grown to some extent as a cut flower variety, but its chief value lies in its striking beauty as an outdoor bloomer and bedder with bronzy-green foliage.

Radiance. (Cook, 1909.) (H. T.) Brilliant rosy-carmine, shaded with rich opaline-pink tints in the open flower, which is large, full, of fine form, with cupped petals. A constant and fragrant forcer, producing strong, upright canes and an excellent keeper in summer. Seedling from Cardinal.

American Beauty or Mme. Ferd Jamin. (Ledecheux, 1875.) Generally conceded to be the most grandly beautiful of Roses in size, form and color. Rich red, passing to crimson, very delicately veined and shaded and surpassingly fragrant.

American Beauty

Hoosier Beauty. (Dorner, 1915.) (H. T.) Glowing crimson-scarlet with darker shadings; buds of good length and splendid shape; ample petalage with a texture like velvet, opening into a magnificent bloom of dazzling brilliance, fragrant as "Richmond." A strong and clean grower, free from spot or mildew, producing long, stiff stems with a bud on every shoot, needing no pinching. Ships well in colse-cut state and is a good summer Rose.

General McArthur. (Hill, 1905.) Vivid crimson scarlet, the most beautiful shade of any garden or forcing rose offered, retaining its brilliancy when expanded to flowers of superb form, larger than Liberty or Meteor; free from mildew.

Rhea Reid. (Hill, 1908.) Described by the introducers: "Large as American Beauty (one of its parents), double as Bridesmaid, fragrant as La France, continuous as The Bride, and red as Richmond in winter. Produces a profusion of long canes and resists both mildew and black spot and makes most rapid growth."

Madame Masson. (Masson, 1856.) (H. P.) Massive, double and full flowers of intense red with crimson hue, highly perfumed; a constant and profuse bloomer, very attractive and striking.

HARDY CLIMBERS.

Crimson Rambler. One of the finest climbers; magnificent trusses of deep crimson flowers; makes a fine show as a climber and profuse bloomer for 2 weeks in spring.

Climbing Paul Neyron. Large flower, pink; constant. A superb variety, a fine companion for the next variety.

Climbing Meteor. A deep, double crimson climber. Constant in flower.

Climbing Augusta Victoria. Most beautiful white bud, and flower equaling in beauty the bush Kaiserin Augusta Victoria; constant.

Climbing Testout. Very strong. Light pink.

Red Dorothy Perkins. Profuse red, strong vine.

Climbing American Beauty. A seedling from American Beauty with an admixture of Wichuraiana and Tea blood. Same as its namesake in size, color and fragrance, with the addition of the climbing habit. Better blooming qualities, good foliage, and has proven hardy and withstood heat and drought. American Beauty x Marion Dingree x Wichuraiana.

SHADE AND ORNAMENTAL TREES

MANY fine shade trees die the first season, after being carefully planted, from neglect of cultivation during the summer. Dig extra large holes, 4 ft. across and 2 1/2 ft. deep. It would benefit to dynamite the bottom of the hole. In filling up roots use only good loamy moist soil. Then every two weeks during the summer cultivate the ground whether weedy or not, whether wet or dry, by digging up the soil two inches deep for a radius of four feet. Allow no Bermuda or other grass closer to the tree than four feet for two years. It will be well to mulch the trees with rakings of grass or old leaves. All these points are important. Many start to cultivate during the cool days of spring, but neglect during July and August, just the very time young set trees should have attention. See further instructions on page 4 under "Care of Trees on Arrival."

Your chief happiness lies in the growing ornaments surrounding your home. Such ornaments refine and purify. Neglect them not. Plant 20 to 25 feet on sidewalks; 25 to 30 feet apart in yards and parks. See list of books in front part of catalog.

PRICES

(These prices, as do all others in catalog, include the packing which on shade trees is quite expensive. Those who come to nursery and take shade trees in their own conveyance, will be allowed a discount of 25% from these prices.)

Sizes.	Each	Doz.	100
A 3 to 4 ft.....	\$0.15	\$1.50	\$11.00
B 4 to 5 ft.....	.20	2.00	16.00
C 5 to 6 ft.....	.25	2.50	20.00
D 6 to 8 ft., under 1-inch caliper.....	.30	3.00	24.00
E 6 to 8 ft., 1 to 1 1/4 inches caliper.....	.35	3.50	28.00
F 8 to 10 ft., 1 1/4 to 2 inches.....	.50	5.00	40.00
G 8 to 10 ft., 2 to 2 1/4 inches.....	.75	7.50	60.00
H 8 to 10 ft., 2 1/4 to 4 inches.....	1.00	10.00	80.00

Large sizes, 2 1/2 to 4 inches in Maple, Sycamore and Locust, from \$1.25 to \$3.00 each.

Elm, American White. (Ulmus Americana.) Our tall, wide spreading, native broad-leaved, white, or American Elm. The new growth long and switchy, sometimes pendant at the ends, often, however (forming the vast type), limbs gracefully upward. Attains one hundred feet or more. Indispensable in all Southern plantings.

Hackberry. (Celtis Occidentalis.) Perhaps the healthiest, most vigorous, most durable of our native trees, in all soils and conditions. Invaluable as street trees or as single specimens on the lawn and in grouping. We have found the hackberries, four to seven years old, transplant better than younger trees, which is very uncommon, the opposite of most trees. Plant with the view of their standing and growing for generations.

Locust, Black. (Robinia Pseudacacia.) A well known species, largely planted throughout our country as shade and street trees, wind breaks and timber belts. Very popular in the treeless prairies, especially west of the 100th meridian. Of rapid growth, reproducing itself quickly after cutting, and the timber is very durable.

Maple, Silver or Soft. (Acer Dasyacarpum.) Grows best in moist, rich soil, but succeeds almost anywhere. A rapid, chaste, beautiful tree, suited to a wide range of purposes. Heads in a globular form, branching at crotch, does not have a leader like the Sycamore. Leaves silvery beneath; turn scarlet in fall.

Male Russian Mulberry. The flowers on this tree are nearly staminate, but have rudimentary pistil, which sometimes metamorphoses and will set insignificant fruit, especially first season or two after transplanting, but after tree recovers from check of transplanting and gets into full growth, rarely any fruit sets. What fruit does set does not begin to compare in size and productiveness to the regular bearing sorts. This variety does not sprout like the nonfruiting Paper Mulberry. This has a round head of compact form, well filled with leaves. The trees we grow are grafted, the same as the fruiting sorts.

Persimmon. The persimmon makes a good shade tree, but owing to long tap root it is better to get the smaller sizes as described in the fruit section. However, if any one wishes to take the pains to transplant some 8 ft. size trees we have them from \$1 to \$2 each, according to size, from 1 1/4 to 2-inch caliper measure.

Poplar, Carolina. (P. Caroliniensis.) Considered as distinct from the Cottonwood, it differs in its strict, straight appearance, making a more upright, uniform head. A very rapid growing, effective tree, much planted throughout our country.

Weeping Mulberry

Free from cottony blooms.
Sizes A, B, C, D.
Sycamore. Very symmetrical, quick growing. Easy to transplant. Older trees have white underbark. Large leaves. Adapted equally well to black and sandy soils.
Sizes B, C, D, F, G, H.
Weeping Mulberry. Those we have are grown from cuttings hence on their own roots, and not grafted on a straight body. As the tree grows, the under limbs can be cut off and the tree will make its own body of a very pretty effect.

3-year, 4 to 5 feet.....	Each	Dozen
	\$0.75	\$8.00

Flowering Willow. (See under Shrubs.)

Cape Myrtle

DECIDUOUS FLOWERING SHRUBS

LARGELY in demand for massing or grouping effects in landscapes, parks or other ornamental planting, and also as single specimens. Much depends upon the skill of the artist or planter in the proper selection, grouping or massing of Flowering Shrubs, to bring out the most pleasing and artistic effects. It is scarcely practicable to define set rules. Good soil and good culture will be amply repaid.

We have grown a large stock of shrubs to meet the growing demand which is increasing. As the Southwestern country is getting older, more attention is being paid to ornamentation of Homes, Yards, Parks, etc. To be successful, plant only those shrubs that are adapted. Do not make a mistake of planting some shrub that makes a fine show 1,000 miles away, for it may not endure the climatic conditions here. All those listed by us are fully successful in the Southwest. We can supply most of the shrubs in one, two or three year sizes, from 6 inches to 5 feet high.

Althea, or Rose of Sharon. (Hibiscus Syriacus.) Altheas are among our most valuable flowering shrubs, blooming for a long time, and deserve to be in every collection. We have an assortment of distinct kinds, namely, Duchess de Brabant, purplish red; Joan de Arc, pure white, and variegated white with pink penciling.

Ages.	Each	Dozen
1-year.....	\$0.20	\$2.00
2-year.....	.35	3.50

Butterfly Bush. So named because the flowers attract the butterflies, and if there are many butterflies in the region, they will be swarming over the bush while in bloom. It is a strong growing shrub, with weeping branches, and at end of each branch there is a pendant of heliotrope-like flowers of heliotrope or lavender color.

Sizes.	Each	Dozen
6 to 10 inches.....	\$0.15	\$1.50
10 to 18 inches.....	.25	2.50
3 to 5 ft., heavy.....	.60	5.00

Bush Honeysuckle. Upright with bending canes. Blooms in February with sweet white flowers.

Sizes.	Each	Dozen
1-year.....	\$0.15	\$1.50
2-year.....	.20	2.00
3-year.....	.35	3.75

Cape Myrtle. (Lagerstroemia.) This is a Southern plant, much esteemed, very effective both as a single specimen or a small tree, or in groups, as a large shrub. Blooms throughout the entire summer, producing great masses of beautifully fringed flowers in immense panicles. A single tree on the lawn is most effective, or a mass of them produces a most magnificent background. The crimson is a beautiful, bright red. The light pink is very distinct. We have three colors in stock, namely, Light Pink, Improved Bright Pink, Crimson.

Sizes.	Each	Dozen	100
1-year plants.....	\$0.15	\$1.60	\$12.50
2-year plants.....	.25	2.50	21.00
3-year plants.....	.40	4.50

Berberis Purpurea. (Purple Barberry.) Foliage a beautiful deep purple all the year; a splendid specimen shrub and almost indispensable in contrastive groupings.

Sizes.	Each	Dozen
2-year, 1 to 2-foot.....	\$0.25	\$2.50

Berberis Thunbergi. (Thunberg's Barberry.) Dwarf. Inimitably neat and dense of growth, yet graceful because of its drooping branches. Yellow flowers are followed by vivid scarlet fruit, the foliage changing in fall to scarlet and gold.

Sizes.	Each	Dozen
2-year, 10 to 18-inch.....	\$0.25	\$2.50

FLOWERING SHRUBS—Continued.

Lilac

Deutzias. Valuable, self-sustaining shrubs which vary considerably in height and habit, but bloom alike in dainty bell or tassel-shaped flowers borne thickly in wreaths a'long their branches. The taller sorts are useful for specimens, groups, and the background of shrubberies; the dwarfers, for borders or for planting near the house. We have two sorts, namely:

Deutzia Crenata. Upright woody shrub that blooms early in spring, profuse and fragrant. Light pink.

Deutzia Watsonii. (Pride of Rochester.) Double pure white.

Sizes.	Each	Dozen	100
1-year.....	\$0.15	\$1.40	\$12.00
2-year.....	.25	2.50	20.00

Lilacs. (Syringa.) Best beloved of all the old time garden shrubs; whose flowers never fail to charm with their delicate beauty or refresh with their tender fragrance.

Sizes.	Each	Dozen	100
Common White Lilac,			
2-year.....	\$0.15	\$1.50	\$12.00
Common Purple Lilac,			
2-year.....	.15	1.50	12.00
Rose Colored Persian			
Lilac.....	.25	2.50	20.00
Purple Persian Lilac...	.25	2.50	20.00

Philadelphus Coronarius, or Mock Orange. (Improperly called Syringa, Sweet Syringa, etc.) A rather upright shrub of good appearance, bearing in April a profusion of single white flowers one inch wide, in rather dense racemes, very fragrant and effective.

Sizes.	Each	Dozen	100
2 to 3 feet, 2-year.....	\$0.15	\$1.75	

Philadelphus Grandiflorus. Of same habit of growth as the *Philadelphus Coronarius*, except the flowers are larger and bloom in May here.

Sizes.	Each	Dozen	100
2 to 3 feet, 2-year.....	\$0.15	\$1.75	

Pomegranates. Shrubs with glossy green leaves with large, waxy-like, beautiful flowers about two inches across. General hardy in North Texas, but fully hardy from Waco, Tyler and South. We have two colors: Double Salmon Pomegranate, Double Scarlet Pomegranate.

Sizes.	Each	Dozen	100
1-year, 1 to 2-foot.....	\$0.15	\$1.50	\$12.00
2-year, 2 to 3-foot.....	.20	2.00	16.00

Pyrus Japonica. (Scarlet or Japan Quince, Devil's Fire.) A gorgeous sight of fiery red flowers very early in spring; in full bloom before leaves come out. Fine for single specimen, screen or hedge.

Sizes.	Each	Dozen	100
1-year.....	\$0.15	\$1.40	\$11.00
2-year.....	.20	2.00	16.00

Privet. (See under Hedging Plants.)

Rhus Cotinus. (Purple Fringe.) (Smoke Tree.)

A conspicuous spreading shrub or small tree with large leaves; overhung in mid-summer by cloud-like masses of light, mist-like flowers—having the appearance of smoke at a distance.

Sizes.	Each	Dozen	100
2-year, 2 to 3-foot.....	\$0.25	\$2.50	
2-year, 3 to 4-foot.....	.40	4.00	

SALVIAS

Greggii. A new shrub found native in Southwest Texas. Blooms from early spring to late fall. Always covered with bright red flowers. Makes a neat, compact, graceful shrub 2 to 4 feet high. Endures heat well.

Sizes.	Each	Dozen	100
1-year, 1 to 2-foot.....	\$0.25	\$2.75	
2-year, 2 to 3-foot.....	.40	4.00	

SPIREA

All the *Spiraeas* bloom with a riotous extravagance which makes them quite striking. Their individual style, color and habits of growth differ so markedly that a collection of varieties will ensure bloom the entire season and still evade the monotony of repetition.

Spiraea Argentea. Medium growth. Spikes two to three inches long with delicate white flowers; the relative long stamens to short petals make it look fringe like. Blooms all summer.

Sizes.	Each	Dozen	100
1-year.....	\$0.15	\$1.50	
2-year.....	.20	2.00	

Spiraea Billardii. Strong growth. Spikes three to five inches long of closely set flowerlets of pinkish red color. Profuse and blooms all summer.

Sizes.	Each	Dozen	100
1-year, 1 to 2-foot.....	\$0.15	\$1.50	\$10.00
2-year, 2 to 3-foot.....	.20	2.00	15.00
3-year, 3 to 4-foot.....	.25	2.50	20.00

Spiraea Prunifolia fl. pl. (Bridal Wreath.) Plum leaved foliage; tall growing, but will prune to any desired height. Blooms early in March and is very effective with its long gracefully curving branches covered thickly their whole length with small, double white flowers.

Sizes.	Each	Dozen	100
1-year.....	\$0.15	\$1.50	\$12.00
2-year.....	.20	2.00	16.00
3-year.....	.25	2.50	

Spiraea Van Houttei. Pure snow white, single flower, with dark eye in center, borne in globose clusters similar to *Reevesii* in this respect, very graceful. A complete fountain of pure white bloom in April.

Sizes.	Each	Dozen	100
1-year.....	\$0.15	\$1.50	\$12.00
2-year.....	.20	2.00	15.00
3-year.....	.30	2.80	21.00

Mint Tree. (*Vitex Abnus Castus*.) Will grow to height of 20 feet in five to six years, but has shrub-like shape, globular in form. Leaves are deeply five fingered. Has spikes of blue flowers all summer. Foliage has mint-like fragrance.

Sizes.	Each	Dozen	100
1-year.....	\$0.25	\$3.00	
2-year.....	.40	4.00	

Flowering Willow, so-called. (*Chilopsis Saligna*.) A fine tree-like shrub blooming profusely from spring or all through the summer, even in

SHRUBS—Continued.

the hottest weather. Flowers purple, tubular, 1 to 2 inches long; very desirable for large yards.

Sizes.	Each	Dozen
1-year, 2 to 3-foot.....	\$0.25	\$2.75
2-year, 3 to 5-foot.....	.40	4.50

Hardy Orange. (See under Hedging Plants.)

CLIMBING VINES

These constitute Nature's own living drapery, indispensable to "set off" the various objects of a well appointed place. They are very graceful and effective.

Climbing Roses. See list under Roses.

Honeysuckle, Chinese Evergreen. Foliage light green, dense, rapid grower; flowers white and buff. **Each, 20c; dozen, \$2.00; 100, \$16.00.**

Honeysuckle, Fuchsia Leaved. Of the coral type, vine upright, flowers red on outside of corolla with yellow inside, perpetual bloomer, very fragrant, generally evergreen, one of the best climbers. Foliage dark green. **Each, 20c; dozen, \$2.25; 100, \$17.00.**

Honeysuckle. (Halls.) Flowers very fragrant, white in opening, becoming buff. Very profuse,

perpetual from early spring until fall; evergreen. **Each, 20c; dozen, \$2.25; 100, \$17.00.**

Climbing Euonymus. (Euonymus Seiboldi.) Heretofore it has been used chiefly for ground-cover and low walls, but now it has proved its ability to climb high and preserve its character of a beautiful broad-leaved evergreen, even in the smoky city of Pittsburgh. For the first few years it clings closely to walls in a mat of small, glossy leaves, but when established it becomes more shrubby in character, throws out strong branches and has broad, glossy leaves similar to those of the Japan Euonymus shrub. 2-year, 1 to 2-foot. **Each, 25c; dozen, \$2.50.**

Trumpet Creeper. A stout, woody, handsome vine, with compound leaves and perpetual, waxy, large, tubular orange flowers in clusters; fine to ornament out-houses, tree bodies, etc., as it climbs by aerial roots. **Each, 15c; dozen, \$1.25; 100, \$10.00.**

Wistaria. American purple. Hardy; fine for arbors, porch screens, etc. Profuse in early spring. **Each, 15c; dozen, \$1.40; 100, \$11.00.**

Virginia Creeper. (Ampelopsis quinquefolia.) Five-lobed or fingered leaf; bright green in summer, turning scarlet in fall; completely covers dead trees, brick walls, fences. Not poisonous. **Each, 15c; dozen, \$1.40; 100, \$11.00.**

CONIFEROUS EVERGREENS

MUCH care should be exercised in transplanting Evergreens not to allow the roots to be exposed to sun or air. Our rule is to coat the roots, as soon as dug, with a puddle of earth or mud, and pack with moss. Evergreens will be much benefited if protected from wind and sun until they begin to take hold of their new soil. This can be done by placing barrels or boxes over them. The spring winds are specially very hard on transplanted Evergreens. Little care and good judgment will insure their success, while neglect will mean failure.

PRICES

Sizes.	Each.	Dozen	100
A 6 to 12 inches.....	\$0.20	\$2.00	\$15.00
B 12 to 20 inches.....	.25	2.75	22.00
C 20 to 30 inches.....	.40	4.00	30.00
D 3 to 4 ft.....	.75	7.50	
E 4 to 5 ft.....	1.00	10.00	

Golden Arborvitae. A compact, moderately slow growing form, beautiful shape and symmetrical. Makes beautiful specimens.
Sizes A, B, D, E.
Chinese Arborvitae. Dark green, more open in growth than the Golden Arborvitae, also of a more rapid growth. While the Golden is more suited for planting in small yard, on walks or in cemetery, the Chinese is better suited for large open spaces and in large yards or parks.
Sizes C, D, E.
Austrian Pine. Slower grower than the White

or Yellow Pine. Endures heat of South well and will live long time after becoming established.
Sizes C, D.
Colorado Blue Pine. Of a darker cast than any of the other pines, with longer needles. Does well in the South as well as in the mountains.
Sizes C, D.
Scotch Pine. Dwarfish, of compact habit, of lighter green than the Austrian Pine. With longer needles than the Austrian but not so long as the Colorado Pine.
Sizes C, D.

BROAD LEAVED EVERGREENS

These comprise such Evergreens as Magnolia, Cape Jasmine, Laurel, etc. The same precautions must be observed in transplanting as with Conifers, and it is far safer and better in addition to these precautions, to have the leaves removed, from most kinds, when taken up, and let them put out a new set of leaves. After being carefully planted and properly watered, it is well to mulch with coarse material to prevent rapid drying out.

Euonymus Japonica. An evergreen similar in appearance to Box, but with larger, more glossy leaves and more rapid grower than the Box. Fine for single specimens. Also makes pretty hedging plants for walks and borders, as it does not grow near so rapidly as the privets.
Sizes. Each Dozen 100
6-inch..... \$0.15 \$1.25 \$10.00
12-inch..... .25 2.50
18-inch..... .40 4.00
Euonymus Pulchelus. A very dwarf plant

with exceedingly small leaves, scarcely ever exceeding a foot high.
Sizes. Each Dozen
3-year, 5 to 6 inches..... \$0.25 \$2.50
Dwarf Evergreen Vox. Has small green, glossy leaves. Can be used to edge walks where something is wanted that will remain small; or can be planted as specimens.
Sizes. Each Dozen
3-year, 4 to 6 inches..... \$0.15 \$1.50
3-year, 6 to 10 inches..... .25 2.25

HEDGING PLANTS

Amour Privet. Darker green and more nearly evergreen than California Privet. Plant more spreading than California Privet, and will endure more cold. Not so easy to root from cuttings as the California, and for this reason stock is limited.
Sizes. Each Dozen 100
1-year, 1 to 2-foot..... \$0.10 \$1.00 \$7.00
2-year, 2 to 3-foot..... .15 1.60 10.00
3-year, 4 to 5-foot..... .25 2.75 18.00
California Privet. One of the most popular; used for screening or hedging purposes around yards and lawns; also splendid for single specimens. Nearly evergreen.
Sizes. Each Dozen 100
1-year, 4 to 6-inch... \$0.05 \$0.40 \$2.50
1-year, 6 to 12-inch... .10 .75 4.00
2-year, 12 to 20-inch... .15 1.25 5.00
3-year, 3 to 4-foot... .20 2.00 12.00
3-year, 4 to 5-foot... .30 3.00 18.00
Polish Privet. This is a new privet from the North and originally from Poland, and will endure more cold than the California Privet. Foliage a darker green than the California.
Sizes. Each Dozen 100
1-year, 6 to 8-inch... \$0.10 \$1.00 \$7.00
1-year, 8 to 15-inch... .15 1.40 9.00

Hardy Orange. (Citrus Trifoliata.) This has proven by test here one of the most beautiful and efficient hedges known. In three years will turn stock. Does not sprout. As tap roots go straight down, does not exhaust soil any great distance away. Has proven perfectly hardy at 15 degrees below zero. In spring is full of beautiful white flowers, and full of yellow fruit in fall. It is easily transplanted.
Sizes. Each Dozen 100
1-year, 4 to 8-inch... \$0.10 \$0.75 \$3.00
2-year, 10 to 20-inch... .15 1.25 7.00
3-year, 2 to 3-foot... .20 2.00 15.00
Euonymus Japonica. An evergreen similar in appearance to Box, but with larger, more glossy leaves and more rapid grower than the Box. Fine for single specimens. Also makes pretty hedging plants for walks and borders, as it does not grow near so rapidly as the privets.
Sizes. Each Dozen 100
6-inch..... \$0.15 \$1.25 \$10.00
12-inch..... .25 2.50
18-inch..... .40 4.00

PERENNIALS—FOR BEDDING

HYBRID HARDY PERENNIAL HIBISCUS

BY HYBRIDIZING the native species *Hibiscus Moscheutos*, *Hibiscus Militaris*, and *Hibiscus Coccineus*, we have obtained from the common Marsh Mallows a most remarkable lot of splendid varieties in numerous shades from pure white with crimson eye, through most delicate and rich pinks from blush to dark pink, crimson of many shades, and glowing scarlet, as though glossed with varnish. The colors all are of clear, fresh, lively shades. This group of wonderful flowers, rich enough for the garden of any king, eclipsing *Cosmos* and *Shasta Daisies* a thousand times, we have produced in a few generations of selecting and crossing. The flowers are often 8 to 12 inches in diameter and glow like suns of various colors. As soon as known, these new creations will become exceedingly popular, as the plants are of the easiest culture and are perpetual bloomers throughout the summer in the driest seasons. They grow 3 to 6 feet tall. The tops die down in the fall, but roots live for many years, sending up many stalks to flower each season. The seeds sown early in spring will produce blooming plants the latter part of the first season.

Of all the wonders produced by hybridization, none is more remarkable or strikingly beautiful for bedding in borders or in the garden than these.

In sending plants, we leave a part of the last season's (dead) top as a handle by which to lift and otherwise handle the roots. The roots should never get dry, and plant so the crown is covered up. New top will come out from same crown as indicated by the dead top.

As the plants do not come true from seed, so we do not list separate colors, but send the roots, which may bloom either Scarlet, Pink or White with variations, no two hardly alike.

1-year roots.....	Each	Dozen	100
2-year roots.....	\$0.10	\$0.90	\$6.00
	.15	1.40	8.00

We have saved seed from the choicest plants, mixing the colors, which we offer at 25 cents per packet. The seed should be sown in April, about cotton planting time, in loamy, well pulverized soil, about an inch deep.

Iris. A fine bedding perennial, blooming early in spring, with double flag-like flowers, in various shades of blue and purple. We have an assortment of 10 of the best German varieties.....	Each	Dozen	100
Zebra Grass. The prettiest and most enduring of all grasses. Cross striped with thin lines of white. Makes soft plumes in fall.....	\$0.10	\$0.70	\$4.00
Pampas Grass. A strong growing grass, producing fine white plumes for winter decorating.....	.10	.75	5.00
	.10	.75	4.00

CHRISTMAS TREES

We have a lot of overgrown Red Cedar *Arborvitae* and Holly from 5 to 10 feet high, from 3 to 7 feet through, which, unless much care is taken, are too large for transplanting. These can be cut off at or just under the ground and make fine Holiday trees or the greens used for decorating. Price, 50 cents to \$1.00 each at nursery. Packing and delivery extra.

SPRAY PUMPS AND SPRAYERS

Spraying to combat plant diseases, insects and fungus troubles has become such an important necessity we will take pleasure to assist our customers to get the best sprayers at the lowest prices. We do not keep any sprayers in stock, but same can be sent direct from the factory to the buyer. This enables us to secure them at a less cost than if we carried in stock, as we can save the freight charge from factory to our place and also cost of keeping in stock. We are able to get them direct from the factory at a discount, and as we will be at no expense, we give our customers the benefit of the discount we are able to obtain. We describe below a few of the most popular sizes, but we can also secure other sizes to your needs.

For a complete catalog with descriptions of all kinds of sprayers, large and small, for cart and wagon, send direct to E. C. Brown Company, Rochester, New York, for such catalog. When you do so, mention that you saw the notice in our catalog.

THE AUTO-SPRAY No. 1. THE WORLD'S STANDARD COMPRESSED AIR SPRAYER.

Adapted for every variety of spraying where a hand sprayer can be used. Made in heavy brass or galvanized iron as desired, and has tank capacity of three gallons of solution. The pump is of heavy brass, 2 inches in diameter, and two or possibly three pumpings will empty the tank under higher and more constant pressure than any other knap-sack sprayer. The brass tank will withstand chemical solutions, and is recommended. Also the Auto-Top shut-off, which is automatic in action and operates a self-cleaning wire through the nozzle.

Auto-Spray No. 1-A, brass tank, stop-cock	Net Cash \$8.00
Auto-Spray No. 1-B, brass tank, auto-pop	8.50
Auto-Spray No. 1-C, galv. tank, stop-cock	5.00
Auto-Spray No. 1-D, galv. tank, auto-pop	5.50
Brass 2-inch Extensions	60

THE AUTO-SPRAY No. 40. THE BEST WHITEWASH AND PAINTING MACHINE AND GENERAL PURPOSE SPRAYER EVER MAN- UFACTURED.

This is a strong, powerful hand sprayer with a capacity of 8 gallons of mixture. It is perfectly adapted to all-around use, for tall trees, shrubs and vines, as well as for applying whitewash or cold water paints. It is as simple as it is strong in construction. The reservoir is made of heavy galvanized steel, the pump being all brass. An agitator attached to the handle keeps the solution thoroughly mixed. Easily carried from place to place or mounted on a wagon. Absolutely the most popular for applying whitewash and paints. Furnished with complete equipment, which includes 8 feet of the best 3-ply discharge hose, 8 feet of iron extension, lever shut-off and vermored nozzle.

Auto-Spray No. 40-B, galv. tank, with full equipment	Net Cash \$12.00
Auto-Spray No. 40-A, brass tank, with full equipment	15.00

THE AUTO-SPRAY No. 24. BARREL SPRAYER FOR ORCHARD AND FIELD CROPS.

For those who require a barrel sprayer of exceptional durability and high pressure, this machine is specially recommended. It may be operated all day without fatigue, and is warranted to operate four nozzles if required. All working parts and valves are fully exposed and instantly get-at-able. The plunger is fitted with outside graphite packing which can be readily adjusted, and will seldom require renewing. The air chamber is large and insures a steady, constant pressure.

Auto-Spray No. 24, pump only	Net Cash \$12.80
Mounted on barrel	16.00
20 feet 3-ply 1/2-inch discharge hose	2.88
Bamboo brass lined extension, with stop-cock and drip shield, length up to 10 feet	2.40
Non-Clog Atomic Nozzle, brass	1.00

NON-CLOG ATOMIC NOZZLE.

This nozzle is intended for use with all barrel pumps and power sprayers. It is made of cast bronze or aluminum and is fitted with standard 1/2-inch pipe thread so that it will fit all connections of standard make. It is positively the only nozzle that will not clog, despite the claims of other manufacturers. Can be adjusted by a simple mechanism to throw every gradation of spray. Each nozzle is furnished with four discs, with apertures of different size, giving the nozzle capacity of one, two, three or four vermored according to the disc that is used.

NON-CLOG ATOMIC NOZZLE.

All brass, straight, or 45 degree angle	Net Cash \$1.00
Aluminum, straight, or 45 degree angle	1.25
Brass elbow, 45 degree, furnished separate	20

NON-CLOG JR.

All brass, straight, or 45 degree angle	\$0.50
Aluminum, straight, or 45 degree angle	.75
